

PRESS RELEASE

INPUT AND OUTPUT PRICE INDICES IN AGRICULTURE – LIVESTOCK: May 2017

The evolution of the Input and Output Price Indices in Agriculture – Livestock, with base year 2010=100.0 for May 2017, on the basis of provisional data, is as follows:

The Output Price Index in Agriculture – Livestock (excluding subsidies) increased by 3.8% in May 2017, compared with May 2016. The corresponding index in May 2016 had recorded a decreased of 4.0% compared with May 2015 (Table 1).

The Output Price Index in May 2017 decreased by 0.9% in comparison with April 2017 (Table 2).

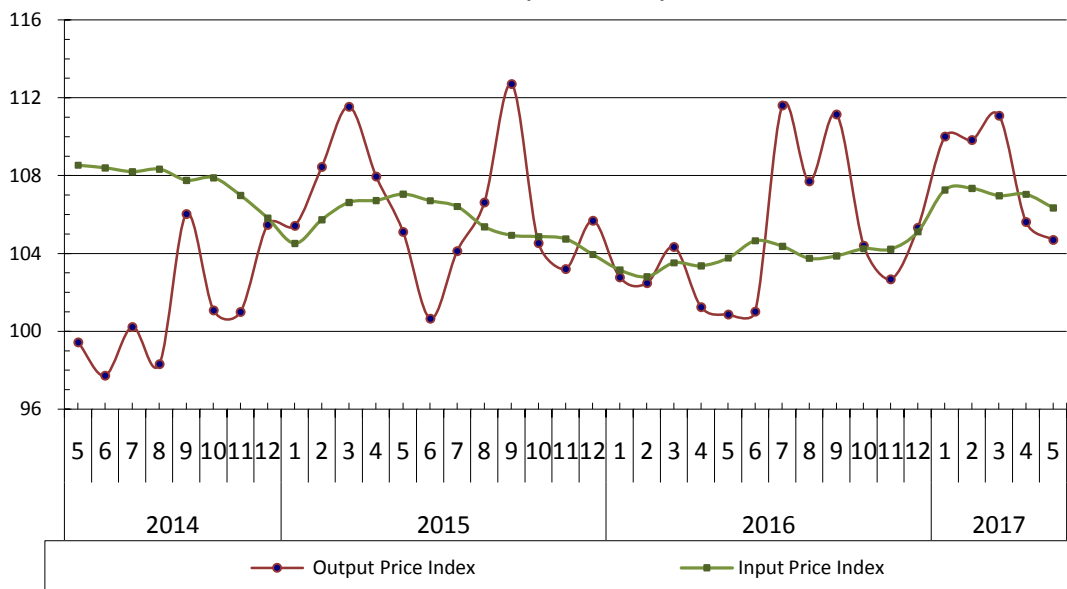

The twelve-month weighted average index from June 2016 to May 2017 increased by 2.5%, compared with the corresponding index of the period from June 2015 to May 2016 (Table 3).

The Input Price Index in Agriculture – Livestock in May 2017 increased by 2.5%, compared with May 2016. The corresponding index in May 2016 had recorded a decreased of 3.1% compared with May 2015 (Table 4).

The Input Price Index in May 2017 decreased by 0.7% in comparison with April 2017 (Table 5).

The twelve-month average index from June 2016 to May 2017 increased by 0.9%, compared with the corresponding index of the period from June 2015 to May 2016 (Table 6).

The increase of 3.8% in the Output Price Index in May 2017 compared with May 2016 is on account of:

- increase of 6.9% in crop output group; and mainly on the rates of change of the groups: vegetables and horticultural products, fruits, olive oil
- decrease of 0.8% in animal output group; and mainly on the rates of change of the groups: animals, animal products.

The increase of 2.5% in the Input Price Index in May 2017 compared with May 2016 is on account of:

- increase of 2.8% in goods and services currently consumed in agriculture group; and mainly on the rates of change of the groups: energy and lubricants, fertilizers and soil improvers
- increase of 1.5% in goods and services contributing to agricultural investment group; and mainly on the rates of change of the groups: materials and other vehicles.

METHODOLOGICAL NOTES

Generally	The compilation of the Input and Output Price Indices in Agriculture and Livestock started in 1967 with base year 1966=100.0. These indices are released with their current form since April 2013, with base year 2010=100.0 and the time series were revised accordingly.
Purpose of the indices– definitions	<p>The purpose of the Output Price Index is to measure the relative change in the prices that the producers receive in the agricultural – livestock sector from the sale of their products. The purpose of the Input Price Index is to measure the change in the prices paid by producers for the purchase of the means, goods and services used in the production process.</p> <p>The Output Price Index is composed of the crop and the animal output sub-indices. The Input Price Index consists of the sub-indices of intermediate consumption and of fixed capital formation goods.</p> <p>As regards the Output Price Index, the prices collected are the market prices of the products. The market price is defined as the price received by the producer without subsidies, transport expenses and excluding VAT or other taxes or levies.</p> <p>As regards the Input Price Index, the collected prices refer to the prices paid for by the producers to buy the goods and services they need for their agricultural and livestock production, excluding VAT and transport expenses.</p>
Legal basis	The compilation of the Input and Output Price Indices in the Agriculture and Livestock sector is based on voluntary agreements between Eurostat and the Member States. The foundations for these agreements were laid in the early seventies.
Reference period	Month.
Base year	2010=100.0.
Revision	The Input and Output Price Indices are fixed-basis indices. The most recent revision took place with base year 2010=100.0, with April 2013 as first reference month. The revision was carried out in the framework of the agreement between EU Member States and the European Union (EU), according to which, for reasons of comparability, these indices have to be revised every five (5) years and more specifically in the years ending in 0 and 5.
Statistical classification	According to the common methodology used by the EU Member States and Eurostat, the groups of products of the Agricultural Price Indices follow the same classification of the groups as in EAA (Economic Agricultural Accounts).
Geographical coverage	The indices cover the whole country.
Coverage of economic activities	The Input and Output Price Indices cover the transactions for products and services in the sector of agriculture and livestock. In addition, the transactions for olive oil and must - wine are covered, which are included in the manufacturing sector when their production – manufacturing process takes place at the level of agricultural unit, thus it is considered to be an activity of the agricultural sector.
Seasonality	Seasonality of products influences the agricultural and livestock production and as a result some products are not available every month in a calendar year. For this reason, the weighting coefficients of output products differ per month in the year.
Statistical survey	<p>The sources of price collection are the agricultural cooperatives (unions), which collect the final products, as well as, the commercial and the industrial enterprises, which buy the final products directly from the producers.</p> <p>The price data for the output price index are collected from approximately 783 sources and price data for input prices are collected from approximately 760 sources.</p>
Publication of data	The Input and Output Price Indices with the new base year (2010) are released since June 2013 with April 2013 data as first reference month. The time series with base year 2010=100.0 are available from January 2000 onwards.
References	More information on the methodology concerning the compilation and calculation of the indices, as well as the time series is available on the website of ELSTAT, at: http://www.statistics.gr/en/statistics/-/publication/DKT30/- .
