^{*}Provisional data

METHODOLOGICAL NOTES

Generally The Wholesale Turnover Index is a quarterly index, which was first released in

2006,based on the year 2005=100,0.

Purpose of the index – definitions

The purpose of this index is to measure in value terms the activity of wholesale trade in the market. Turnover excludes VAT and comprises the totals invoiced by the enterprise during the reference period (quarter), which correspond to sales of goods or services supplied to third parties.

Legal basis The compilation of the Wholesale Turnover Index is governed by Council Regulation

(EEC) No.1165/98 "concerning short-term statistics" and the requirements of Regulation (EC) No 1158/05 of the European Parliament and Council, amending the original Regulation 1165/98. Additionally the compilation of the above index is governed by the Regulation No.1893/2006 of the European Parliament and of the Council for the

implementation of the new statistical classification NACE Rev.2.

Reference period Quarter.

Base year 2005=100.0.

Revision Pursuant to the provisions of Council Regulation No 1165/98 concerning short-term

statistics, the index in question is updated every five (5) years in years ending in 0 or 5. The purpose of updating the Wholesale Turnover Index is to adapt the index to changes

in the breakdown of wholesale trade.

Statistical The new EU (Eurostat) NACE Rev.2 statistical classification of economic activities was used, in conformity with Regulation (EC) 1893/2006 of the Council and the European

Parliament.

Geographical The index covers the whole of the country, with data from 40 prefectures. **coverage**

Coverage of The index covers division 46 "Wholesale trade, except of motor vehicles and economic activities The index covers division 46 "Wholesale trade, except of motor vehicles and motorcycles" of NACE Rev 2 statistical classification of economic activities.

Statistical survey In the survey for the compilation of the Wholesale Turnover Index(2005=100.0) it was

decided to include 21.221 wholesale trade enterprises listed in the Business Register, having an annual turnover (in 2005) equal to or higher than 300,000 euros from which a

random sample of 463 enterprises was therefore selected.

Calculating theThe index is calculated by the chaining method. The index is reduced to a typical quarter by multiplying the turnover estimates for the current quarter by the appropriate correction

factor.

Compiled indexSeries

The time series of this index of the period 2005-2008(division 51of the classification NACE Rev.1) was adjusted, during 2009, to the new classification NACE Rev.2 (division NACE Rev.2)

NACE Rev.1) was adjusted, during 2009, to the new classification NACE Rev.2 (division 46). Moreover, as required by Commission Regulation (EC) 472/2008 concerning

backcasting, data was estimated for the years 2000-2004.

Publication of data Data of the Wholesale Turnover Index(2005=100.0) are released quarterly ,70 days after

the end of the reference guarter, starting from 1st guarter 2000.

References More information on the methodology concerning the compilation and calculation of the

index and for the time series is available on the ELSTAT website (www.statistics.gr).
