METHODOLOGICAL NOTES

Generally

The Index of Persons Employed in Retail Trade is a quarterly index that was first compiled in 2004 with 2000=100.0 as the base year and backdated data from the 1st quarter of 2000.

Purpose of the index – definitions

The purpose of the Retail Trade Turnover Index is to measure the performance of the goods and services market.

The compilation of the index includes the number of persons employed in the enterprise irrespective of their status (owners, partners and their family members) and the nature of their work (managers, sales persons and auxiliary staff) and irrespective of whether they work on a provisional or seasonal basis, full time or part time, with or without remuneration.

Legal basis

The compilation of the Index of Persons Employed in Retail Trade is governed by Council Regulation (EEC) No.1165/98 "concerning short-term statistics" and by the Regulation No.1893/2006 of the European Parliament and of the Council for the implementation of the new statistical classification NACE Rev.2.

Reference period

Quarter.

Base year

2005=100.0.

Revision

Pursuant to the provisions of Council Regulation No 1165/98 concerning short-term statistics, the index in question is updated every five (5) years in years ending in 0 or 5.

Statistical classification

The new EU (Eurostat) NACE Rev.2 statistical classification of economic activities was used, in conformity with Regulation (EC) 1893/2006 of the Council and the European Parliament. The most important change in the Retail Trade section of the new NACE Rev. 2 classification, compared to NACE Rev. 1, is that the <u>retail sale of automotive fuel and lubricants</u> is classified under <u>retail trade</u> and not under the "trade, maintenance and repair of motor vehicles and motorcycles" division of NACE Rev. 1.

Geographical coverage

The Index covers the whole of the country, with data from 47 prefectures.

Coverage of economic activities

The index covers division 47 of NACE Rev 2 statistical classification of economic activities.

Statistical survey

For the compilation of the revised Index of Persons Employed in Retail Trade (2005=100.0) a subsample was used, which was obtained from the existing sample of observation units from the Turnover Index in Retail Trade survey. More specifically, out of the 1609 enterprises included in the survey sample for the Turnover Index in Retail Trade (2005=100.0), 746 enterprises were selected covering all the strata of the above survey, which resulted from the cross-linking of the economic activity division to the turnover value of enterprises.

Calculating the indices

The Index of Persons Employed in Retail Trade is calculated as a chain index by means of the methodology used for calculating the Retail Trade Turnover Index.

Compiled index series

For the present revision of the Index of Persons Employed in Retail Trade (2005=100.0), it was deemed necessary to calculate parallel series for this index, the first one including persons employed in enterprises selling automotive liquid fuel and lubricants and the second one without such persons. This decision was made because of the inclusion of automotive fuel and lubricants in retail trade and in order to maintain comparability with the previous series of the Index of Persons Employed in Retail Trade (2000=100.0).

In order to establish the link with the previous series of the Index of Persons Employed in Retail Trade (2000=100.0) these series underwent backdating and backcasting by including the persons employed in enterprises selling automotive liquid fuel and lubricants and without including such persons, up to the 4th quarter of 2008, in compliance with Commission Regulation (EC) 472/2008 concerning backcasting.

Publication of data

The time series of the revised Index of Persons Employed in Retail Trade (2005=100.0), including persons employed in enterprises selling automotive liquid fuel and lubricants or not including such persons (in line with the index published until the 4th quarter of 2008) have being published since 2000.
