PRESS RELEASE

PRODUCTION INDEX IN CONSTRUCTION: First quarter 2016

The Production Index in Construction (IPC) for the 1st quarter 2016 compared with the 1st quarter 2015 recorded a fall of 9.3%. A year ago the year-on-year rate of change of the index was 47.1% (Table 1).

The Production Index in Construction (IPC) for the 1st quarter 2016 compared with the 4th quarter 2015 decreased by 39.4%. A year ago the quarter-on-quarter rate of change of the index was -32.6% (Table 2).

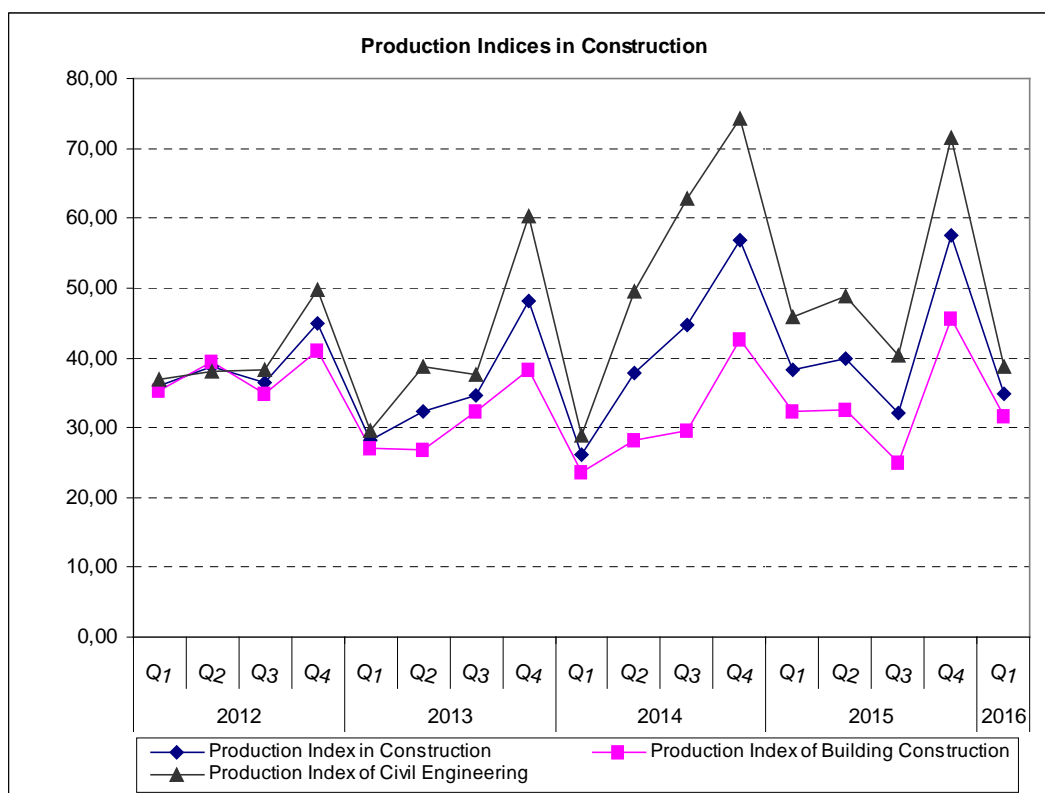

The adjusted for the seasonal effects (e.g. holidays, weather condition etc) Production Index in Construction for the 1st quarter of 2016 compared to the corresponding index of the 4th quarter of 2015 decreased by 1.6% (Table 3).

	Q3	33.82	-18.9	25.96	-24.5	41.48	-18.6
	Q4	43.99	30.1	36.27	39.7	53.72	29.5
2016	Q1	43.31	-1.6	38.07	5.0	51.04	-5.0

Note:

- 1. The indices are calculated with infinite decimal figures and are rounded up to two decimal figures when published.*
- 2. Percentage changes are calculated on the basis of indices with infinite decimal figures and are rounded up to one decimal figure when published.*
- 3. The whole time-series with seasonally adjusted indices is recalculated every time a new observation is added in the time-series.*

METHODOLOGICAL NOTES

Generally	The Production Index in Construction (IPC) has being compiled since 2000.
Purpose of the index	The IPC is an important business cycle indicator which shows the quarterly activity in the production of building construction and the production of civil engineering sectors. A more specific object of the Production Index in Construction is to compare the magnitude (volume) of the current quarter's output at any given time with the corresponding figure for a given base period.
Legal basis	The compilation of IPC is governed by Council Regulation (EEC) No.1165/98 "concerning short-term statistics" amended by the Regulation (EC) No 1158/2005 of the European Parliament and of the Council of 6 July 2005 concerning short-term statistics.
Reference period	Quarter.
Base year	2010=100.0.
Revision	The IPC is a fixed base index. Pursuant to the provisions of Council Regulation No 1165/98 concerning short-term statistics, the index in question is updated every five (5) years in years ending in 0 or 5.
Statistical classifications	For the compilation of the revised indices the following classifications have been used : -The Eurostat classification NACE Rev. 2 Statistical Classification of Economic Activities in the European Community (Council Regulation 1893/2006) - Section F : Construction. Divisions 41. 42 and 43 -The Classification of types of Construction – CC.
Geographical coverage	The Index covers the whole country.
Coverage of economic activities	The index covers the section of construction at the level of divisions (41. 42 and 43) and the level of products.
Statistical survey	The sampling unit used is the enterprise and the sample of enterprises surveyed for the Production Index in Construction (2010=100.0) comprises 274 enterprises with turnover of EUR 4 million and more according to the results of the annual Construction Survey with reference year 2010 and the business register of EL.STAT. The coverage in turnover of the above mentioned enterprises exceed 40% of the total turnover in 2010.
Seasonal adjustment	Seasonal adjustment is the process of elimination of the effect of seasonality in time series data to improve comparability between the data reference periods. The seasonally adjusted index is carried out by applying the method TRAMO - SEAT and using software JDemetra+ 2.0.0 .The seasonal adjustment is applied at the level of the overall index (Production Index in Construction) and for the two components of the index. Building Construction and Civil Engineering. For the adjustment of the overall index and the components, the direct approach is applied, namely each time-series is seasonally adjusted independently.
Publication of data	<p>The Production Indices in Construction are released quarterly in a Press Release of standardized form with certain days.</p> <p>More information about the methodology concerning the compilation and calculation of the index and for the time series is available on the Hellenic Statistical Authority (EL.STAT) website (www.statistics.gr).</p>
