

PRESS RELEASE

INDUSTRIAL PRODUCTION INDEX: March 2017, y-o-y increase of 8.7%

The evolution of the Industrial Production Index (IPI) with base year 2010=100.0 in March 2017, on the basis of provisional and working day adjusted data, is as follows:

The Overall Industrial Production Index in March 2017 recorded an increase of 8.7% compared with March 2016. The corresponding annual rate of change of the Overall IPI in March 2016 was -3.6% (Table 1).

The average Overall Industrial Production Index for the period from January to March 2017 recorded an increase of 8.9% compared with the average IPI of the period from January to March 2016 (Table 2).

The seasonally adjusted Overall Industrial Production Index in March 2017 recorded a decrease of 2.0% compared with February 2017 (Table 4).

The following graphs depict the evolution of the seasonally and non-seasonally adjusted Overall Industrial Production Index, as well as the monthly rates of change (m-o-m) of the seasonally adjusted index.

It should be noted that the time series with the seasonally adjusted indices is recalculated every time a new observation is added in the time series. Therefore, the seasonally adjusted data differ from the data published in the previous Press Release.

Evolution of the Industrial Production Index in March 2017

I. Annual changes: March 2017/ March 2016 (Table 1)

The 8.7% increase of the working day adjusted Overall IPI in March 2017, compared with the corresponding index in March 2016, is due to the annual changes of the sub-indices in the following industrial sections:

Increase of:

- 34.3% in the Mining and Quarrying Production Index.
- 8.6% in the Manufacturing Production Index.
- 4.8% in the Electricity Production Index.
- 0.4% in the Water Supply Production Index.

II. Rates of change of the average index in the period January – March 2017 compared with the corresponding index of the period January – March 2016 (Table 2)

The 8.9% increase of the working day adjusted Overall IPI in the 3-month period January – March 2017, compared with the corresponding index in January – March 2016, is due to the corresponding rates of change of the sub-indices in the following industrial sections:

Increase of:

- 11.6% in the Mining and Quarrying Production Index.
- 5.5% in the Manufacturing Production Index.
- 22.4% in the Electricity Production Index.
- 1.1% in the Water Supply Production Index.

III. Monthly changes: March 2017/ February 2017 (Table 4)

The 2.0% decrease of the seasonally adjusted Overall IPI in March 2017, compared with the corresponding index in February 2017, is due to the monthly changes of the sub-indices in the following industrial sections:

1. Decrease of:

- 17.2% in the Electricity Production Index.
- 0.9% in the Water Supply Production Index.

2. Increase of:

- 0.2% in the Mining and Quarrying Production Index.
- 1.1% in the Manufacturing Production Index.

The following graph depicts the evolution of the Industrial Production Index and the Industrial Sections Indices.

Table 1. Annual rates of change of the Industrial Production Index*(Working day adjusted data, according to the real number of working days)*

Notes:

1. The indices are rounded up to two decimal figures when published and percentage changes up to one decimal figure when published.
2. The whole time-series with seasonally adjusted indices is recalculated every time a new observation is added in the time-series.

METHODOLOGICAL NOTES

Generally	The Industrial Production Index (IPI) is compiled since 1959.
Purpose of the index	The IPI is an important business cycle indicator, which shows the monthly activity in the Mining and Quarrying, Manufacturing, Electricity and Water Supply divisions. More specifically, the objective of the Industrial Production Index is to compare the magnitude (volume) of the output in the current month with the corresponding output in any given period which is considered as base period. The IPI shows the evolution of the value added of the production factors cost, at constant prices.
Legal basis	The compilation of the IPI is governed by Council Regulation (EC) No 1165/98 concerning short-term statistics. Furthermore, the IPI is governed by Regulation (EC) No 1893/2006 of the European Parliament and of the Council, by Commission Regulation (EC) No 656/2007 and by Council Regulation (EC) No 451/2008.
Reference period	Month.
Base year	2010=100.0.
Revision	The IPI is a fixed base index. Pursuant to the provisions of Council Regulation No 1165/98 concerning short-term statistics, the index is updated every five (5) years, in years ending in 0 or 5.
Statistical classifications	At the level of branches of economic activities, the classification NACE Rev.2 of Eurostat was used (Regulation No 1893/2006), while at the level of main industrial groups, the allocation of two-digit and three-digit NACE Rev. 2 headings to categories of aggregate classification was used, in accordance with Council Regulation No 656/2007. At product level, the classification CPA 2008 of Eurostat was used, according to Council Regulation No 451/2008.
Geographical coverage	The Index covers the whole Country.
Coverage of economic activities	The index covers all the sections of industry, the main industrial groups, all levels of economic activities (divisions, groups, and classes) and the level of products.
Statistical survey	The data are collected from a sample of 1,338 enterprises. The survey covers 354 products and the measurement of the surveyed products is made in terms of output quantities or in terms of production value or turnover, according to the specific situation in each branch of economic activity.
Seasonal adjustment	Seasonal adjustment is the procedure followed to remove the impact of seasonality on the time-series (i.e. the impact of monthly effects, e.g. holidays, tourist period etc), in order to improve comparability over time. The method used is the TRAMO-SEATS method with the use of JDemetra+ 2.0.0. For the seasonal adjustment of the Industrial Production Index at 2-digit level of NACE Rev.2, at section level (B – Mining and Quarrying, C – Manufacturing, D – Electricity and E – Water Supply) and for the Main Industrial Groupings (MIGs), the direct approach is applied, namely each time-series is seasonally adjusted independently. For the overall Industrial Production Index, the indirect approach is applied, with the seasonally adjusted IPI being computed by aggregating the seasonally adjusted MIGs using appropriate weights.
Publication of data	The IPI with the new base year (2010) is released since August 2014, with June 2014 as the first reference month. Data with base year 2010=100.0 are available from January 2000 onwards.
References	More information about the methodology concerning the compilation and calculation of the index and for the time series is available on the website of the Hellenic Statistical Authority (ELSTAT) (http://www.statistics.gr/en/statistics/-/publication/DKT21/).
