EXPLANATORY NOTES

Turnover indices in Transport sector

The turnover indices in services are important business indicators, which show the evolution of the market for services. The objective of these indices is to calculate the activity of the surveyed sector in value terms. The Turnover comprises the totals invoiced by the observation unit during the reference period (quarter) and corresponds to the market sales of goods and services supplied to third parties. Subsidies on goods or services are also included. Turnover excludes VAT and other similar deductible taxes directly linked to turnover as well as all duties and taxes on the goods or services invoiced by the unit. Income classified as other operating income, financial income and extraordinary income in company accounts is also excluded from turnover

Legal basis

The compilation and publication of these new indices in Transport Sector is based upon the requirements of the Council Regulation (EC) No 1165/98 concerning short-term statistics as well as the amendment Regulation 1158/2005 of the European Parliament and Council amending the Council Regulation (EC) No 1165/98.

Reference Date

01/07/2010 – 30/09/2010

Base Year

2005=100,0

Cover

The compilation of these indices comprises enterprises with year turnovers equal or higher than 250.000 euros, represented by a sample of 225 enterprises covering the total of the country.

Methodology

The Turnover Indices in Transport Sector cover the total of the country and are compiled for divisions 49 – land transport / transport via pipelines, 50 – water transport, 51 – air transport, 52 – warehousing and support activities for transportation and 79 - travel agency, tour operator reservation service and related activities of NACE – Rev.2. statistical classification. For reasons of comparison the Turnover Indices, concerning the years 2005 till 2008, for divisions 52 and 79 have been recalculated according to NACE Rev.2.

The turnover indices in Transport are being estimated by applying the forward chaining technique. In primary, the floating base index is estimated by the comparison of the appraised turnover value of the current quarter to the corresponding value of the previous quarter. The fixed index of any two-digit division of business activity concerning the current quarter results from the multiplication of the floating base index by the fixed index of the previous quarter.
