OF GREECE**

Piraeus, 13 September 2007

PRESS RELEASE

Production Index in Construction^{1,2,3,4} (2000=100,0)

Second quarter 2007

The National Statistical Service of Greece publishes the Production Index in Construction, with base year 2000=100,0, for the 2nd quarter 2007, according to provisional and working day adjusted data, as follows:

- The Production Index in Construction for the 2nd quarter 2007, as compared to the 2nd quarter 2006, rose by 21,2%. A year earlier, the year-on-year growth rate of the index was 5,4%.
- The Production Index in Construction for the 2nd quarter 2007, as compared to the 1st quarter 2007, rose by 27,6%. A year earlier, the quarter-on-quarter growth rate of the index was 24,7%.

¹ The Production Index in Construction is a new index with base year 2000=100.0, covering the period from 2000 onwards. The compilation and publication of the new index is based on the framework of requirements of the Council Regulation (EC) No 1165/98 concerning short-term statistics (STS-R), as well as the amendment Regulation (EC) No 1158/05 of the European Parliament and Council, amending the Council Regulation (EC) No 1165/98.

² The purpose of the Production Index in Construction is to measure, on a short-term basis, the price-change adjusted own performance of the construction sector and its most important parts. The index measures the evolution of volume trend in value added at factor cost of production in construction. The main aim of this index is the measurement of the evolution of production in construction. The purposes and the characteristics of the Production Index in Construction apply, as well, to the indices of the two most important parts of construction, the Production Index of Building Construction and the Production Index of Civil Engineering.

³ The Production Index in Building Construction includes the cost of: demolition, site formation and clearance work, general construction work for buildings (new work, additions, alterations and renovation work), installation work of electrical wiring and fittings and other building installation work. Buildings include one- and two-dwelling buildings, multi-dwelling buildings, hotels, office buildings, industrial and retail trade buildings, public entertainment and education buildings, hospitals and other non-residential buildings.

The Production Index of Civil Engineering includes the cost of: motorways, roads, streets, railways and airfields runways, sport facilities, bridges, tunnels, subways, long-distance pipelines, communication and power lines (oil and gas pipelines, electricity lines, telecommunication lines), water projects, etc.

⁴ All figures in this release are based on data adjusted for working days. The data are provisional when first released and become final as soon as all gathered data become definite. More specifically, the data released for the most recent quarter are provisional and are published together with revised data of the previous quarter.

The increase of the Production Index in Construction by 21,2% in the 2nd quarter 2007, as compared to the 2nd quarter 2006, was due to the year-on-year changes as following:

- The Production Index of Building Construction rose by 9,8%.
- The Production Index of Civil Engineering rose by 28,3%.

The increase of the Production Index in Construction by 27,6% in the 2nd quarter 2007, as compared to the 1st quarter 2007, was due to the quarter-on-quarter changes as following:

- The Production Index of Building Construction rose by 26,8%.
- The Production Index of Civil Engineering rose by 28,0%.
