# How Big Data, Open Algorithms and Artificial Intelligence Can Drive Smart Cities and Societies: Towards Human AI Ecologies

Emmanuel Letouzé, PhD

Director, Data-Pop Alliance | Program Director, OPAL Project  
Visiting Scholar, MIT Media Lab | Connection Science Fellow, MIT

SmartStatistics4SmartCities Seminar  
Kalamata, Greece, Oct 5-6 2018

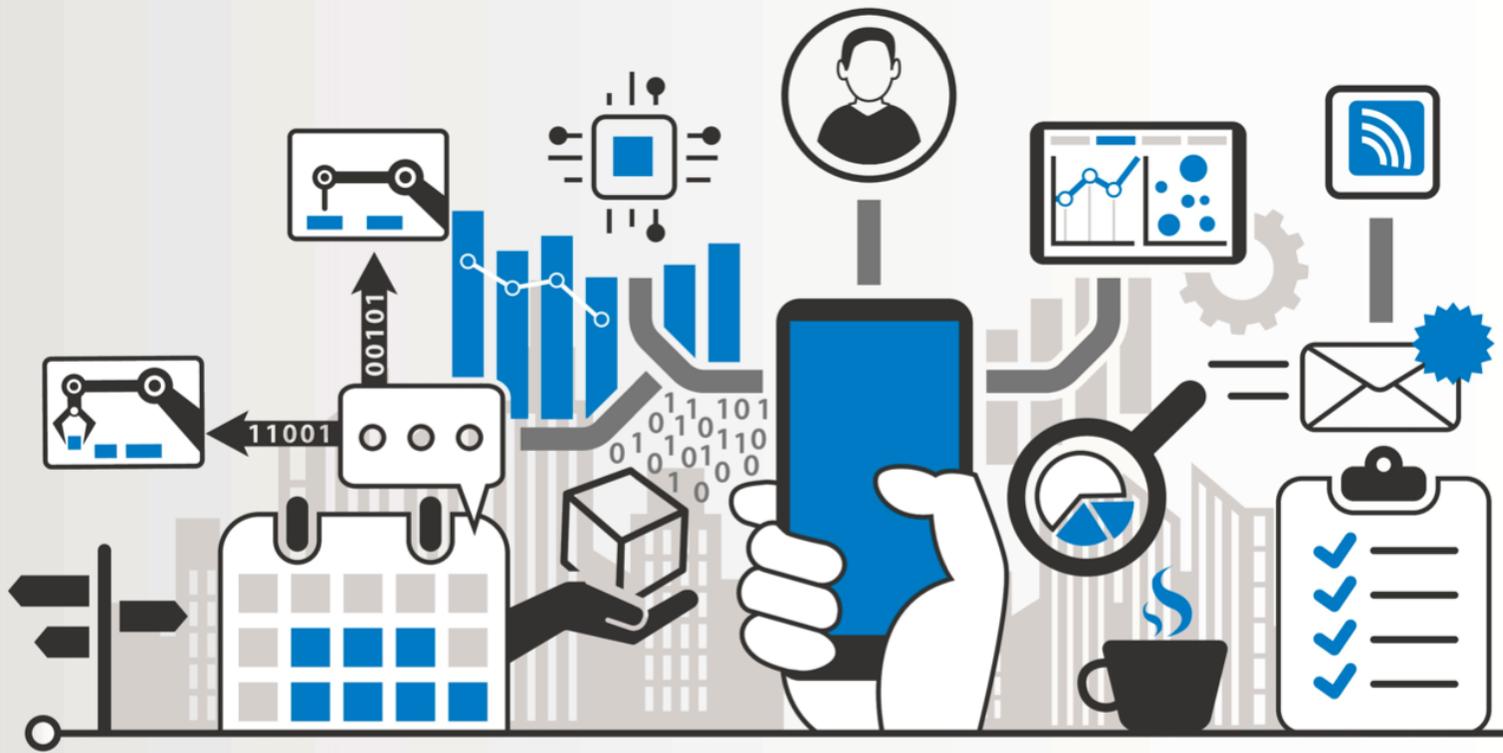

Trust  
me

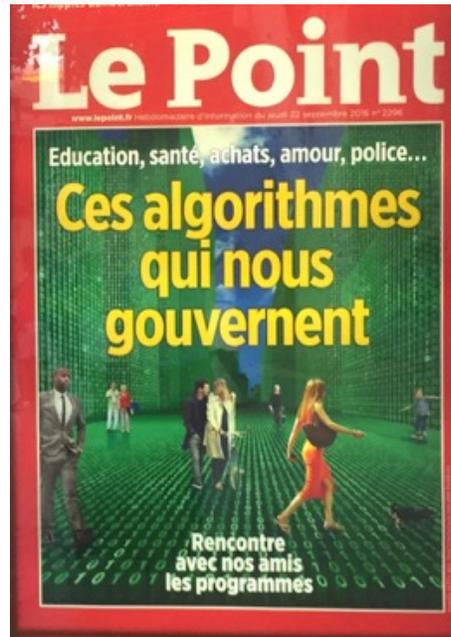

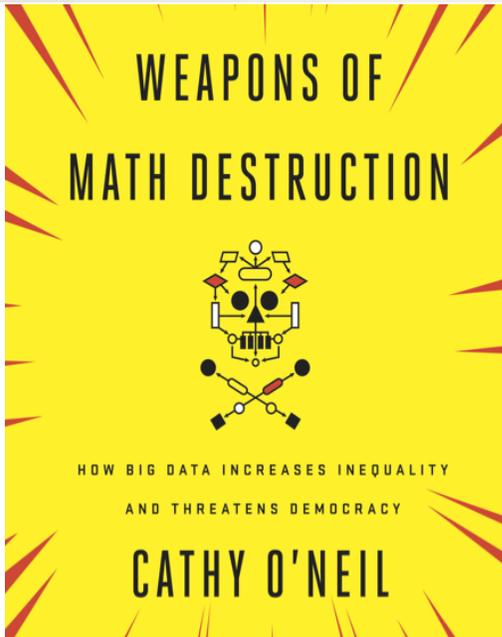

i'm  
a data scientist

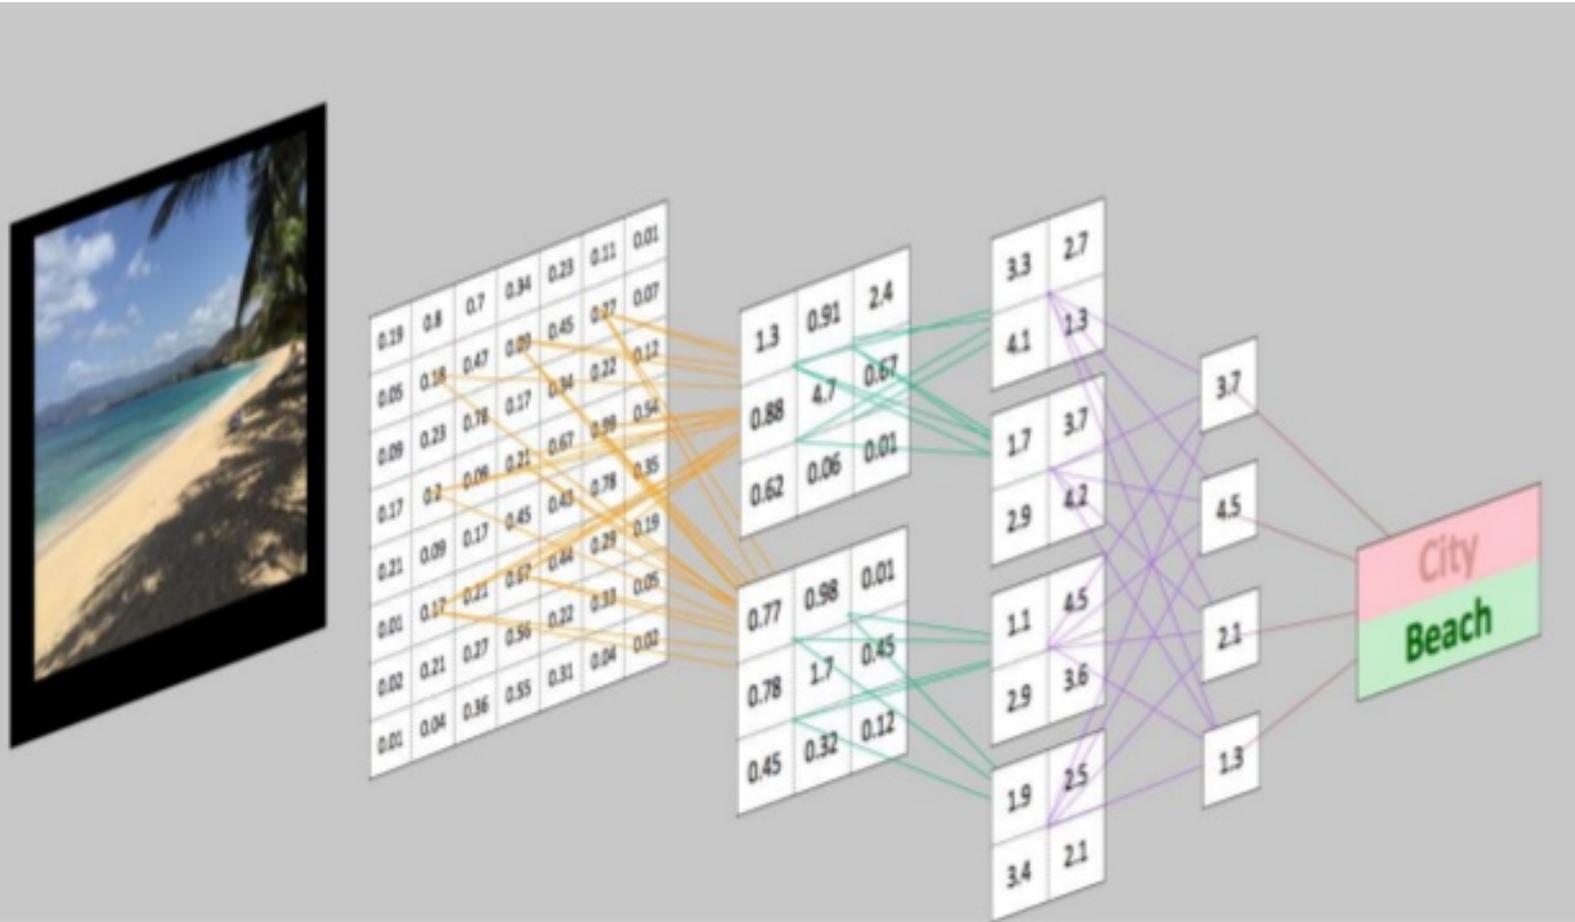

- Fake news. Biases. Automation. Echo chambers. Information overload. CO<sub>2</sub> emissions...
- (Big) Data is getting a bad name. Are data, algorithms and AI threats to sustainable development and democracy?
- Can we instead envision and build a world where Big Data, Open Algorithms and AI drive better, fairer, more sustainable and more resilient cities and societies?
- Let's call these "Human Artificial Intelligence" ecologies. What would it look like, and take?

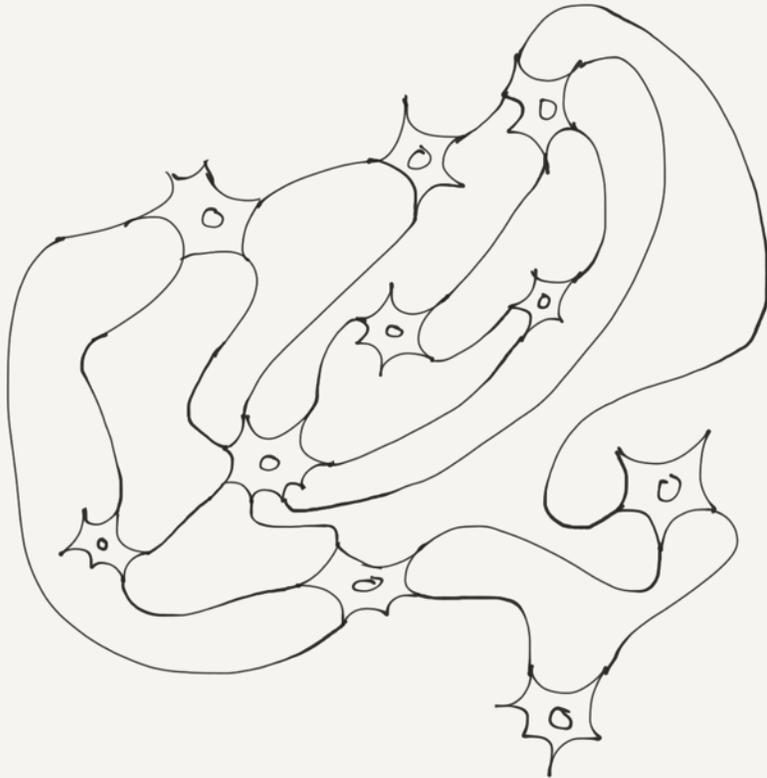

# How do(es) AI(s) Work?

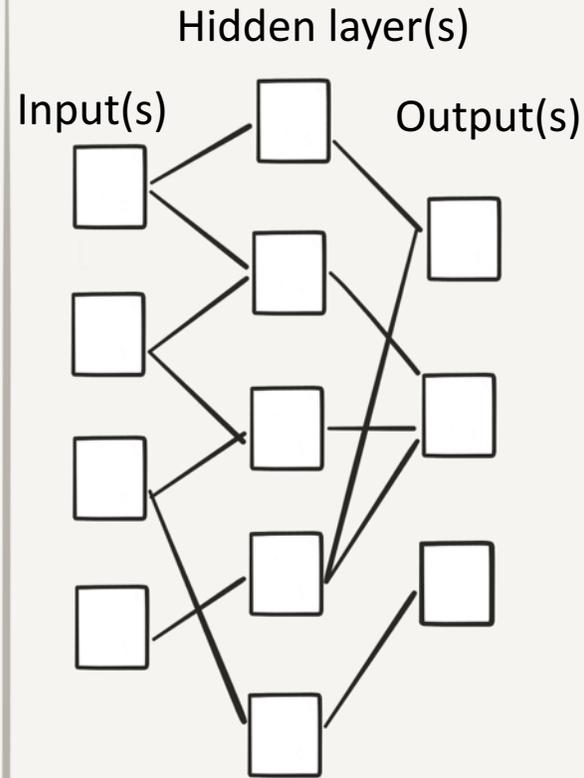

Is this a city or a beach?

1. Try to guess / recognize. Right or Wrong?
  2. Correct: +1. Reward!
  3. Incorrect: -1. Penalty!
  4. Repeat and learn through many feedback loops.
- ➔ (The) machine (is) learning

# Big Data and AIs

BIOLOGICAL

ARTIFICIAL

Artificial intelligence is the **simulation of human intelligence processes by computer systems, especially artificial neural networks (ANNs)** inspired by the biological neural networks that constitute animal brains, which can "learn" (i.e. progressively improve performance on) through iterations and feedback. **AIs are powered by algorithms that learn to automate parts or all of tasks, and the machines they power.** (It's also what has not been invented yet).

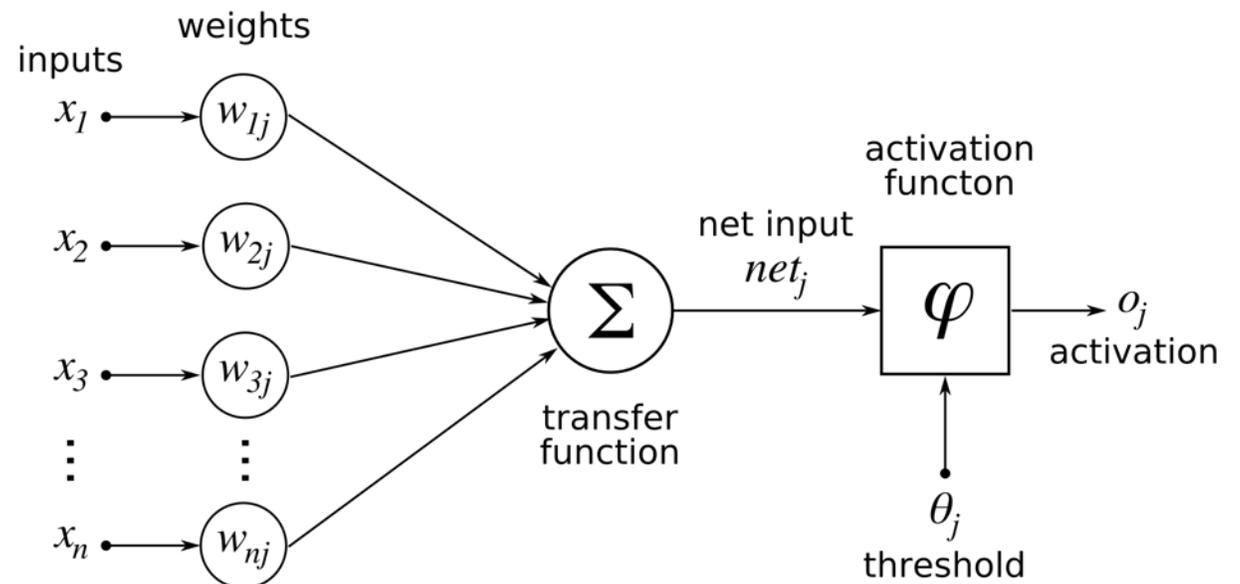

# Is AI some new (black) magic? *No...but...*

*No...*

1. It is **at least 60+ years old.**
2. It still generalizes poorly. It has no sense of context. **It is still pretty stupid.**
3. We are **far from general AI.**
4. **Humans are still in control** (for better or worse)

*...but...*

1. The **(good) magic / core of the current AI is the credit assignment function to encourage and reinforce neurons / functions that help the most achieve the goal (and reverse if not)**
2. The key **difference and is data. Big Data.**

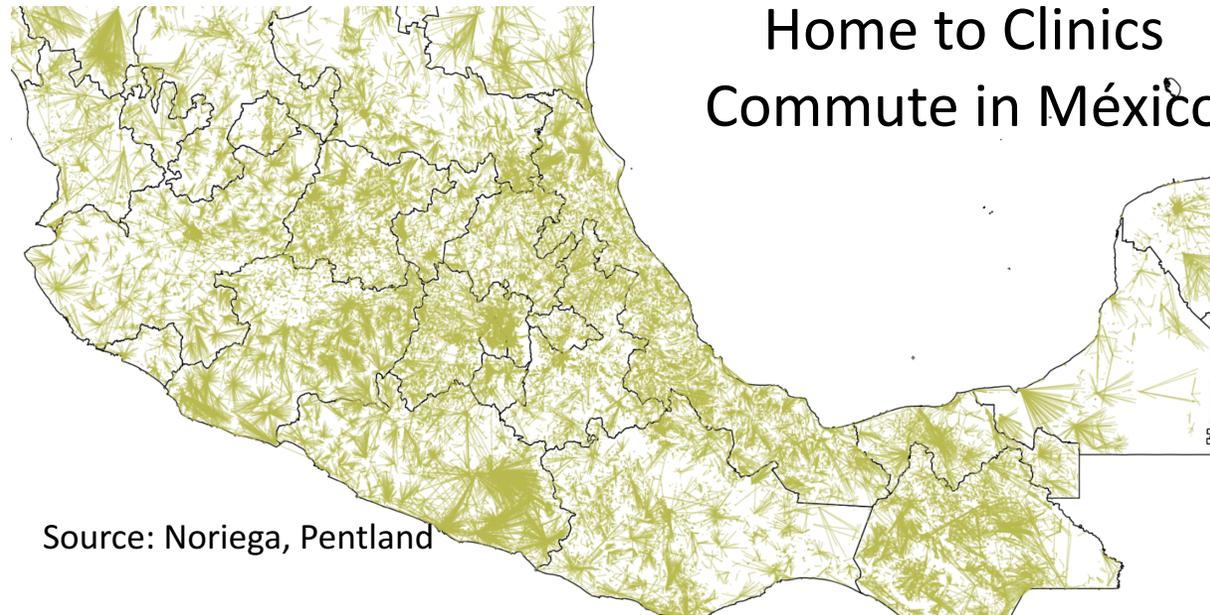

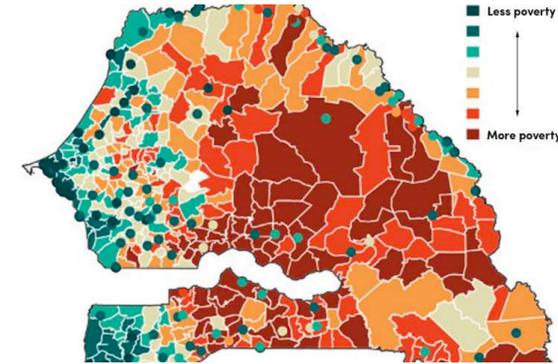

# Some Early Applications

## Scientific Prize and Ethics Mention: Construction of socio-demographic indicators with digital breadcrumbs

F. Bruckschen <sup>(1)</sup>, T. Schmid <sup>(2)</sup>, T. Zbiranski <sup>(1)</sup>

We show that socio-demographic indicators such as population, age, literacy, poverty, religion, ethnicity, electricity supply and others can be estimated in unprecedented detail and virtually ad-hoc using antenna to antenna traffic data only. We offer a uniform approach that can be easily extended to other variables. Results are tested for spatio-temporal robustness and visualized as heat maps.

# But: Power, Politics, Privacy. Who Has Access to Data, How, to Do What? Next: Implications.

# Big Long Term Vision: Towards “Human AI” ecologies

MIT Prof Alex ‘Sandy’ Pentland:

*“The big question that I’m asking myself these days is **how can we make a human artificial intelligence?** (...) I don’t want to think small—people talk about robots and stuff—I want this to be global. (...) What would happen if you had **a network of people where you could reinforce the ones that were helping and maybe discourage the ones that weren’t?** **That begins to sound like a society or a company”**.”*

The Human Strategy. [www.thehumanstrategy.mit.edu](http://www.thehumanstrategy.mit.edu)

# Vision of a “Human AI”

## 1. Key principle

Taking the **key insights of AI especially**

- **role of data**
- **credit assignment function reinforcing “neurons” that work** (teams, groups, policies) through learning

**+ applying this general framework to entire societies**

## 2. Key features

Leveraging **human-machine complementarities**:

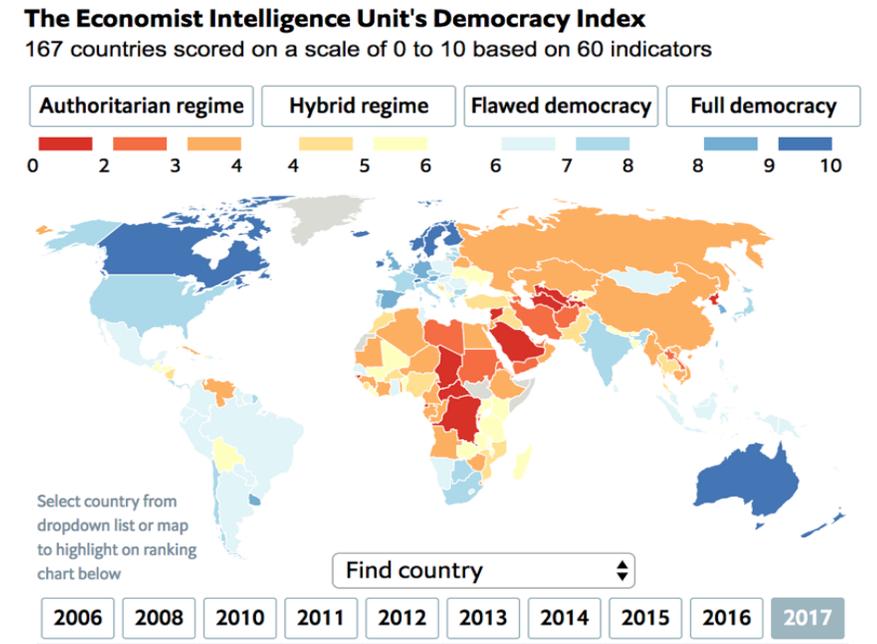

- humans do the strategy and oversight and machines do the tactics and bookkeeping
- Humans + Machines >> Humans or Machines
- New jobs will be created (e.g. machine prison guards but more social workers)
- Resulting ecologies are more agile and resilient

## 3. Key requirements

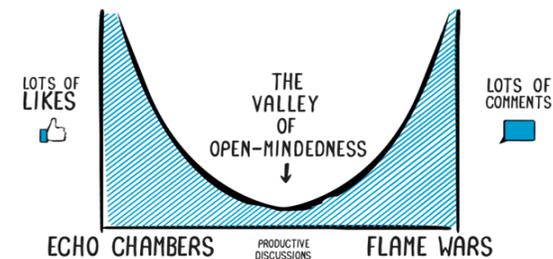

- Good **data** on the system’s functioning and performance
- Good **feedback and response systems** (i.e. *“human or society in the loop”*)
- Some general **agreement on inputs (facts) and outputs (goals)**
- Sufficient **human skills and trust** to oversee, implement, learn, adapt, and again

# Main Challenges to a Human AI

1. Some **powerful agents have strong incentives for this not to work** (e.g. economic and political monopolies benefit from status quo)
2. Most societies / countries currently **lack the appropriate data connections, capacities, and culture** for this
3. There is **widespread (and growing?) digital and analog segregation** with distrust, disdain, echo chambers, alternative facts narratives, hampering cooperation and consensus building
4. We know **AI can and has been used to nurture 3.** (cf Facebook newsfeed; Amazon Prime..)

## POLITICAL DISCUSSIONS ON THE FACEBOOK

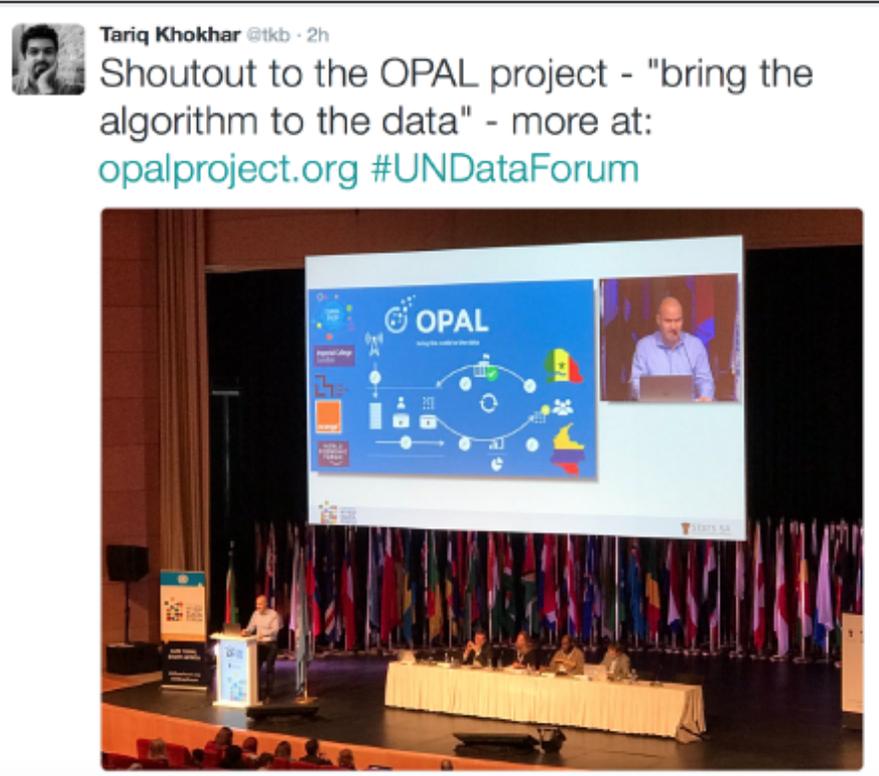

To Rescue Democracy, Go Outside

*Real spaces, not digital ones, will fix our politics.*

# “Open Algorithms”: A Bold New Vision and Project

## Open algorithms: A new paradigm for using private data for social good

By Thomas Roca, Emmanuel Letouzé | 18 July 2016

**The Open Algorithm project:  
Developing indicators, capacity and trust**

To address the complex challenge of data access, Orange, MIT Media Lab, Data-Pop Alliance, Imperial College London and the World Economic Forum — supported by Agence Française de Développement and the World Bank — are developing a platform to unleash the power of “big data” held by private companies for public good in a privacy preserving, commercially sensible, stable, scalable and sustainable manner.

MONDE

## Mettre le Big Data privé au service du bien public

BENOÎT GEORGES - LES ECHOS | LE 06/12/2016

Le projet Open Algorithm vise à utiliser les données d'entreprises privées pour des actions de développement.

# OPAL: 1<sup>st</sup> Generation Data Systems and Standards

1. Partner private companies (here a telecom operator) allow OPAL to access its servers through a secured platform. The **data never leave** the servers.

Global/Local/Crowd  
Open Algo check & certification

2. **Certified open algorithms** developed by developers are sent and run on the servers of partner private companies, behind their firewalls.

ALGO  
DEVELOPPERS

3. A governance system including a *Council for the Orientations of Development and Ethics (CODE)* ensures that the algorithms and use cases are ethically sound, context relevant, etc.; users benefit from **capacity building** activities

4. Key indicators derived from private sector data such as **population density, poverty levels, or mobility patterns, feed into use cases** in various public policy and economic domains. Data are safe, minimized, used (more) ethically.

## Building Literacy for the Data Generation

December 18, 2015

*A unique opportunity exists to develop data literacy education for children born into a world shaped by big data.*

The question of how growing up with digital technology shapes a generation's outlook has fueled discussion since the description "Digital Natives" was coined in 2001. As commentators begin to weigh in on the experience of those born in the decade-and-a-half since then, **Emmanuel Letouzé**, director of Data-Pop Alliance, believes one milestone merits special consideration: The advent of Big Data.

***"Writing is a strange thing. If my hypothesis is correct, the primary function of writing, as a means of communication, is to facilitate the enslavement of other human beings".***

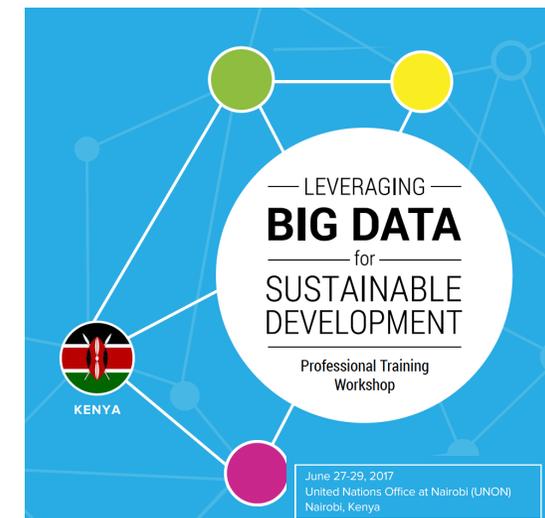

***The fight against illiteracy goes on par with an increase in the control of the Power over citizens."***

DATA-POP ALLIANCE  
WHITE PAPER SERIES

**Beyond Data Literacy:**  
Reinventing Community  
Engagement and Empowerment  
in the Age of Data

October 2015

***"We define data literacy as "literacy in the age of data", i.e. "the desire and ability to constructively engage in society through or about data".***
