

## Causes of Death: 2023

The Hellenic Statistical Authority (ELSTAT) announces statistical data on the causes of death for the year 2023. The data sources are the death certificates submitted by medical practitioners and, for violent or sudden deaths, by the Forensic Medicine Authorities.

Data on the causes of death are compiled in accordance with the 10th Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10, version 2008) which was adopted in 2014. In particular, the data are as follows:

- In 2023, deaths amounted to 128,097<sup>1</sup> (64,898 men and 63,199 women), recording a decrease of 9.0%, in comparison to the 140,792 deaths (70,795 men and 69,997 women) recorded in 2022 (Graph 1).
- The main causes of death in 2023 were diseases of the circulatory system with 40,812 deaths, followed by neoplasms and diseases of the respiratory system with 30,095 and 12,894 deaths, respectively (Table 1, Graph 2).
- Deaths caused by COVID-19 amounted to 5,975<sup>2</sup> (3,131 men and 2,844 women) in 2023. Most of the deaths were recorded in the age group 75 years and over (4,789 deaths), followed by the age groups 60-74 years and 45-59 years with 941 and 208 deaths, respectively. In the age group under 15 years, 4 deaths due to the disease were recorded. The COVID-19 disease was the only cause of death, as mentioned in the death certificates, in the 21.9% of the COVID-19 deaths (1,311 deaths), whereas for the 78.1% (4,664 deaths) there was reference to a pre-existing condition (comorbidity). The most common pre-existing conditions of the deceased by COVID-19 were diseases of the circulatory system, neoplasms and diseases of the respiratory system, with 27.9% (1,666 deaths), 18.4% (1,098 deaths) and 6.6% (395 deaths), respectively (Table 5, Graph 5).
- In comparison to previous years, the share of deaths caused by diseases of the circulatory system increased from 10.0% in 1938 (first year when analytical data were made available) to 25.0% in 1956 (first year after the Second World War for which data were available) and amounted to 31.9% in 2023. The corresponding share of deaths caused by neoplasms rose from 4.1% in 1938 to 11.7% in 1956 and up to 23.5% in 2023. On the contrary, deaths caused by infectious and parasitic diseases, which in 1938 accounted for 18.4% of the total deaths, dropped significantly to 2.8% in 2023 (Table 2, Graph 3). It should be noted that classification changes should be considered when assessing the comparability of data over time.

---

<sup>1</sup> It is noted that the data on deaths are finalized after the processing of the data on the causes of death, and therefore, the total number of deaths presented in this announcement does not fully coincide with the data presented in the announcement on "Vital Statistics: 2023" of the 1<sup>st</sup> October 2024.

<sup>2</sup> Data on deaths caused by COVID-19 presented in this announcement have been compiled according to the International Guidelines of the World Health Organization for certification and classification (coding) of COVID-19 disease as cause of death and may differ from those announced by the National Public Health Organization (EODY).

- The number of deaths due to suicides, as recorded by the Forensic Medicine and Criminal Investigation Authorities, amounted to 488 in 2023, compared to 516 in 2022 (decrease of 5.4%). It should be noted that any discrepancies between these data and the corresponding data of other agencies may be on account of the different methodology used or other underlying factors, such as the need for time-consuming research by the Forensic Medicine Authorities in order to investigate the conditions resulting to the death, deaths caused by late effects after a suicide attempt, etc.
- The data presented in this Publication do not include data on the number of refugees/migrants who died while border-crossing before being registered in the Country or have drowned in Greek territorial waters. The corresponding figures per year are 72 in 2018, 62 in 2019, 59 in 2020, 84 in 2021, 122 in 2022 and 121 in 2023.

The data on the causes of death for the year 2023 are presented below, broken down by sex, age group, place of usual residence of the deceased and month of occurrence (Tables 3,4,6 and 7, Graphs 4,6).

\*Deaths of foreign residents, as well as of those whose usual residence was unknown, are not included.

## **EXPLANATORY NOTES**

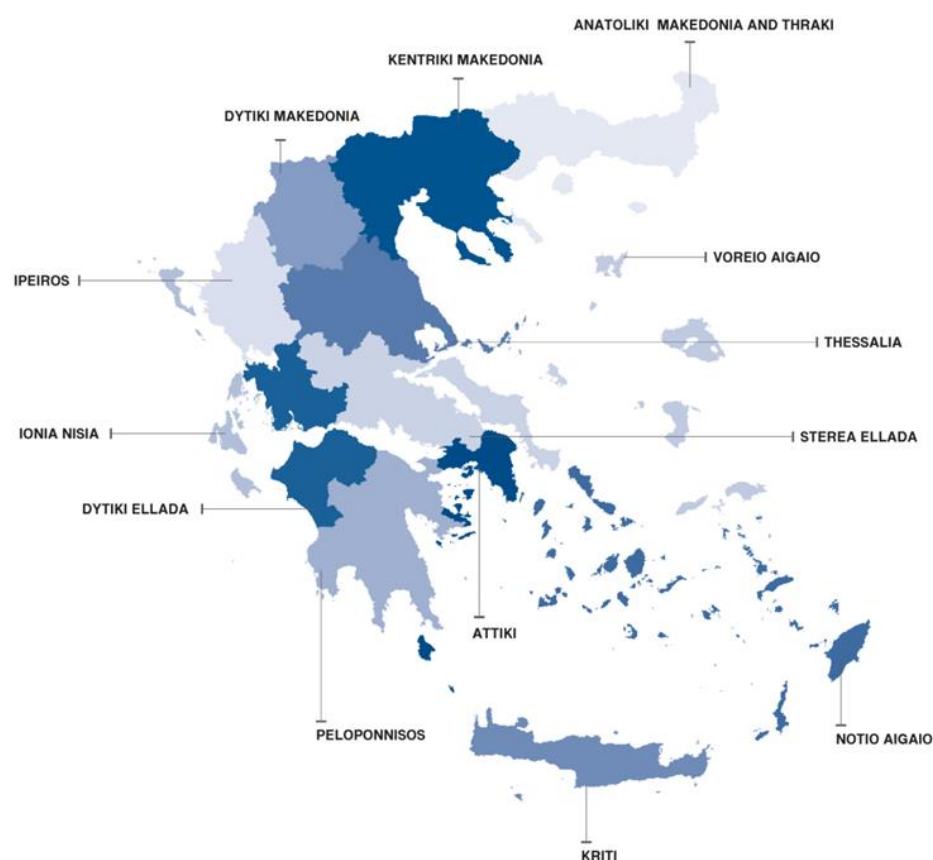

<b>Vital Statistics</b>	Data on the causes of death are part of the Vital Statistics Survey, which is conducted in its current form since 1956. In the context of the survey, individual data on vital events (births, deaths, marriages, registered partnerships and divorces) are drawn, on a monthly basis, from civil registry acts submitted by the Municipal Authorities. From 1938 onwards, data on the causes of death are compiled based on death certificates filled in by medical practitioners or forensic pathologists. As regards violent or sudden deaths, where the cause of death is not specified and more research is needed, data on the causes of death are collected through the Forensic Medicine Authorities. The survey produces statistical results on a yearly basis. Annual data are announced two years after the reference year according to Commission Regulation (EU) No 328/2011.
<b>Legal Framework</b>	The survey is fully harmonized with the European statistical practice: Regulation (EC) No 1338/2008 of the European Parliament and of the Council on "Community statistics on public health and health and safety at work" and Implementing Commission Regulation (EU) No 328/2011, as regards "statistics on causes of death". The survey is governed by Law 344/76 concerning the "Registration of vital events" which lays down the obligations of the Civil Register Offices to collect and then to transmit the data, as well as by Law 3832/2010 on the "Hellenic Statistical System, Establishment of the Hellenic Statistical Authority as an independent authority", as in force.
<b>Coverage</b>	The survey is exhaustive and covers all deaths that have occurred in the Greek territory. Cases of refugees/migrants who died while border-crossing before being registered in the Country or have drowned in Greek territorial waters are not included in the national data on the causes of death.
<b>Reference Period</b>	1/1/2023-31/12/2023.
<b>Definitions</b>	<p><b>Death:</b> means the permanent disappearance of all evidence of life at any time after live birth has taken place.</p> <p><b>Main or underlying cause of death:</b> pursuant to the 10th Revision of the International Classification of Diseases (ICD-10) of the World Health Organization (WHO), is the disease or injury which initiated the train of morbid events leading directly to death, or the circumstances of the accident or violence which caused the fatal injury.</p> <p><b>Cause-Specific mortality:</b> the rate refers to the number of deaths assigned to a specific cause during a given time interval divided by the population in the middle of the year 2023, per 100,000 inhabitants, which is estimated at 10,385,924.</p>
<b>Methodology</b>	<p>Vital statistics data, after having been collected from the Civil Register Offices, undergo the necessary quality checks and statistics on births, deaths, marriages, registered partnerships and divorces are compiled on an annual basis. All causes of death are coded at a central level by a single team of coders to ensure internal coherence. From 2014 onwards, ELSTAT applies the 4-digit ICD-10 Classification of Diseases, 2008 version. The time series up to 2014 are available in the 4-digit ICD-9 Classification of Diseases. Data for the years 2014-2016 are available in both ICD-9 and ICD-10. From 2017 onwards, data are available only in ICD-10.</p> <p>According to the International Guidelines for certification and classification (coding) of COVID-19 as cause of death of the World Health Organization, a death due to COVID-19 is defined for surveillance purposes as a death resulting from a clinically compatible illness, in a probable or confirmed COVID-19 case, unless there is a clear alternative cause of death that cannot be related to COVID disease (e.g. trauma). There should be no period of complete recovery from COVID-19 between illness and death. A death due to COVID-19 may not be attributed to another disease (e.g. cancer), even if there are pre-existing pathological conditions that are suspected of triggering a severe course of COVID-19.</p>

ELSTAT incorporated the additional codes for COVID-19 into the existing 2008 version of ICD-10. According to the International Guidelines of World Health Organization and Eurostat, COVID-19 is classified in Chapter XXII- Codes for special purposes (U00-U99) of the 10th Revision of the International Statistical Classification of Diseases and Related Health Problems (ICD-10), and specifically in the codes U07.1: COVID-19, virus identified and U07.2: virus not identified for the clinically or epidemiologically diagnosed cases, the possible cases and the suspected cases of COVID-19.

**Comments** It should be noticed that in Tables 1, 3 and 7, the subcategory “other external causes” of “violent deaths” includes deaths due to misadventures to patients during surgical and medical care, deaths in cases where an investigation by a medical or legal authority has not determined whether the injuries are accidental, suicidal or homicidal, deaths caused by injuries inflicted by law-enforcing agents (including military) on duty while attempting to enforce the law and deaths caused by injuries during war operations.

**Geographical Classification** Geographical classification is based on the Nomenclature of Territorial Units for Statistics (NUTS).

**Map of the Regions (NUTS2) of Greece**

**References** More information (tables, methodology) concerning Vital Statistics is available on the website of ELSTAT: <https://www.statistics.gr/>, at the link Statistics, Population and Social Conditions, Demography, Deaths-Causes of death (ICD-9) and Deaths-Causes of death (ICD-10).
