(3) For the years 2014, 2016 and 2019, the impact of the support to financial institutions has been positive for the General Government balance. This is due to the fees accruing on the inter-bank lending guarantees and the bond loan scheme and the revenues from bank preference shares, being greater than the expenditures accrued. For the remaining years, the expenditures of the support were larger than the related revenues.

(4) The support to the financial institutions includes the on-going revenues and expenditures associated with interventions starting from 2008, in addition to new revenues and expenditures that arose during the years 2011 - 2019 for the banks' resolution and the recapitalisation of the four core banks.

(1) Any kind of extraction of energy products from natural sources to a usable form is called primary production. Primary production takes place when the natural sources are exploited, for example in coal mines, crude oil fields, hydro power plants or fabrication of biofuels. Transformation of energy from one form to another, like electricity or heat generation in thermal power plants or coke production in coke ovens is not primary production.

- (1) International Trade in Goods Statistics have been revised for the years 2010 – 2018. The revision of the relevant data series was implemented by virtue of EU Regulations 96/2010 and 113/2010. The revision concerns the products under section "Machinery and transport equipment" of the Standard International Trade Classification (SITC 7), especially the arrivals-imports and dispatches-exports of ships and aircrafts.
- (2) From this issue onwards, the data on imports and exports of the bilateral trade with the United Kingdom are included in the relevant data on trade with Third Countries, given that the United Kingdom is now a non-EU country. In order to ensure comparability of the relevant statistics over time, the time series have been reproduced with the United Kingdom being included in Third Countries.

(1) School expectancy corresponds to the expected years of education over a lifetime and has been calculated adding the single-year enrolment rates for all ages from the age of 5 years and over. To illustrate the meaning of school expectancy, let us take an example: school expectancy for the age of 10 would be one year, if all 10-year-old students (in the year of the data collection) were enrolled. If only 50 % of 10-year-old students were enrolled, school expectancy for the age of 10 would be half a year.

(2) Until 2012, the survey was conducted in accordance with the International Standard Classification of Education ISCED 1997. From 2013 onwards, the survey is conducted in line with ISCED 2011.
