

INCOME INEQUALITY, 2019*

Survey on Income and Living Conditions of Households

NATIONAL INCOME

Income inequality indicators

GINI

Gini coefficient is the ratio of cumulative shares of the population arranged according to the level of equivalised disposable income to the cumulative share of the total equivalised disposable income received by them.

For 2019, if we choose randomly 2 persons, the difference between their income is expected to amount to 31.0% of the mean disposable income.

S80/S20

The S80/S20 income quintile share ratio is the ratio of the total of equivalised disposable income received by 20% of the country's wealthiest population to that received by 20% of the country's poorest population.

In 2019 the share of the income of the wealthiest 20% of the population is 5.1 times higher than the share of the income of the poorest 20% of the population.
