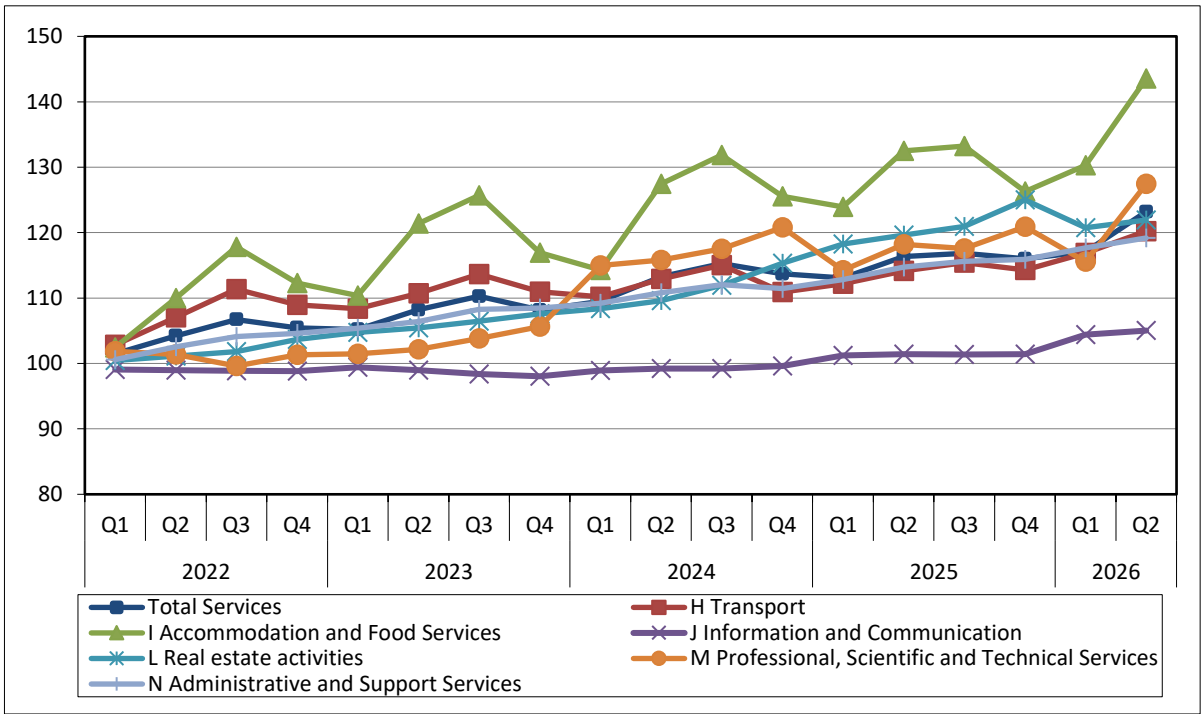
HELLENIC STATISTICAL AUTHORITY

Piraeus, 29 September 2026

SERVICES PRODUCER PRICE INDICES: 2nd Quarter 2026

The Hellenic Statistical Authority (ELSTAT) announces the quarterly Services Producer Price Indices (SPPI), with base year 2021=100.0 and reference period the 2nd quarter 2026 (provisional data). The evolution of the Services Producer Price Indices is presented in Graph 1.

Graph 1. Evolution of Producer Price Indices in Services Sections (2021=100.0)



More specifically, the evolution of the Services Producer Price Indices is depicted in the following tables.

- Table 1 shows the above-mentioned indices for the 2nd quarter of the years, 2025 and 2026 and the respective annual rates of change.
- Table 2 shows the above-mentioned indices for the 2nd quarter of the year 2026 and the respective quarterly rates of change.

The data are provisional when first released and published as final in the next quarter.
On ELSTAT's website and in particular at the link:
http://www.statistics.gr/en/statistics/-/publication/DKT59/-, methodological information on the SPPI is available, as well as the timeseries of the indices.

METHODOLOGICAL NOTES

Producer Price Indices for Services

The Services Producer Price Indices (SPPI) are quarterly indices which were first released in 2007, with base year (b.y.) 2006=100.0, then were revised with b.y. 2010=100.0, 2015=100.0, until the current revision with b.y. 2021=100.0.

Purpose of the indices

The purpose of these indices is to measure the quarterly rates of change in the services producer prices and to record the prices evolution that reflect the supply and demand conditions in the services markets, for the analysis of the real changes in the economy and for monitoring inflationary pressures. In addition, they are used for the deflation of turnover indices in services to calculate the new production (volume) indices in services sections (which are compiled from the year 2024 and retrospectively from 2021), also using as deflators certain services indices of the Harmonized Index of Consumer Prices with fixed taxes (HICP-ST).

Definitions

The services producer price indices (SPPI) are output price indices for the service production of resident producers. The SPPI cover services provided in the market for all uses, that is intermediate consumption, final consumption and exports. The SPPI refer to the overall index (Business to All), while in many divisions they do not differ from intermediate consumption for the branches of services where the production is mainly directed to other production units (Business to Business). Exception case: the two indices for postal and courier services, that are compiled as overall indices and also as partial indices for enterprises (Business to Business) and for consumers (Business to Consumer).
For the compilation of SPPI the recorded transactions are those that reflect the prices received by the producers for services actually sold to purchasers, including discounts, rebates or other charges. The collected prices are the basic prices for services sold. i.e. prices excluding VAT and other similar deductible taxes directly linked to turnover and also excluding all other taxes on products but including any subsidies on products.

Legal framework

The compilation and publication of the indices are based on the Regulation (EU) No 2019/2152 of the European Parliament and of the Council on European business statistics. as well as Commission Implementing Regulation (EU) No 2020/1197 laying down technical specifications and arrangements pursuant to Regulation (EU) No 2019/2152.

Reference period

Quarter.

Base year

2021=100.0.

Revision

Pursuant to the provisions of Council Regulation No 2019/2152 concerning the indices, they are revised, every five (5) years in years ending in 0 or 5, while, in the current revision 2021=100.0 due to the impact of the pandemic, they were revised with base year the year 2021. The purpose of the revision is to adapt the indices to recent developments as regards the structure of services sector.

Statistical classifications

At the level of categories of economic activities the statistical classification NACE Rev. 2 is used (Regulation No.1893/2006), while at the services level the classification CPA 2008 is used according to the Council Regulation No.451/2008.

Geographical coverage

The indices cover the whole country.

Statistical survey

The sampling unit used is the enterprise per Kind of Activity Unit (KAU). The data are collected from 500 enterprises (units), while the total number of observations (prices) is approximately 2,500.

Compilation of indices

The services producer price indices are fixed base indices. The indices are Laspeyres-type indices with weights based on turnover data at 6-digit level that are produced from the specific structural surveys of the year 2021 (while for the divisions 69, 70 of the year 2020). In addition, data from certain services indices of the Harmonized Index of Consumer Prices with fixed taxes (HICP-ST) is taking into account, such as in divisions: H49, H52, I55, I56, I58, J59, J60, J61, L68, M74, N77, N79, N81, N82, in order not to repeat price collection from the same enterprises (units) in the corresponding divisions of services.

Publication of data-References

The SPPI with b.y. 2021=100.0 in divisions and sectoral level and the overall services price index are published since September 2024, with first reference quarter, the 2nd quarter 2024.
The SPPI retrospective timeseries with b.y. 2021=100.0 are available from 2007 to 2020 (in the divisions in which they were initially calculated) and in new divisions and sections level with the overall services price index since 2021. More information is available on the ELSTAT's website at:
http://www.statistics.gr/en/statistics/-/publication/DKT59/-. All tables / all data that were presented in the previous version of the Announcement are published at the same link.
