# ARRIVALS AND NIGHTS SPENT IN HOTELS, SIMILAR ESTABLISHMENTS, TOURIST CAMPSITES AND SHORT-STAY ACCOMMODATION ESTABLISHMENTS 

## Year 2022 (final data)

According to the results of the survey on arrivals and nights spent in hotels, similar establishments and tourist campsites and of short-stay accommodation establishments, conducted by the Hellenic Statistical Authority (ELSTAT), for the total of these establishments, in 2022 compared with 2021, an increase is recorded both in arrivals, by $74.4 \%$, (Tables 1 and 3 ) and in nights spent, by $79.7 \%$ (Tables 2 and 4).

More specifically, in 2022 compared with 2021, an increase of $86.9 \%$ and $89.3 \%$ is recorded in arrivals and nights spent by non-residents, respectively, while arrivals and nights spent by residents recorded an increase of $47.0 \%$ and $41.7 \%$, respectively (Graph 1).

The annual occupancy rate of the bed places in hotels and similar establishments (excluding tourist campsites and short stay accommodation establishments) amounted to 51.1\% in 2022, compared with 42.9\% in 2021 (Graphs 17 and 18). The capacity by category of hotel accommodation establishment is presented in Table 5.

Graph 1. Evolution of nights spent of residents and non-residents in hotels, similar establishments, tourist campsites and short stay accommodation establishments, by month 2021-2022

During 2022, the largest share of arrivals and overnight stays is observed in hotel accommodation establishments ( $79.2 \%$ and $76.8 \%$, respectively) (Graph 3).

According to the monthly distribution of the data, $59.1 \%$ of the arrivals and $66.0 \%$ of the nights spent, in hotels, similar establishments, tourist campsites and short-stay accommodation establishments of Greece, are recorded during the period from July to October (Tables 1 and 2, Graph 5,6 and 7).

As regards the breakdown of the survey data by NUTS 2 Region, a significant increase of arrivals is observed in arrivals and nights spent, in absolute values, in Notio Aigaio ( $72.4 \%$ in arrivals and $81.7 \%$ in nights spent), Kriti ( $74.1 \%$ in arrivals and $78.2 \%$ in nights spent), Attiki ( $89.8 \%$ in arrivals and $90.0 \%$ in nights spent) and Kentriki Makedonia ( $78.8 \%$ in arrivals and $83.0 \%$ in nights spent) (Tables 3 and 4, Graphs 8,9 and 10).

In 2022, the largest share of arrivals and nights spent in hotels, similar establishments, short-stay accommodation establishments and tourist campsites, is recorded by non-residents, i.e. $73.5 \%$ of arrivals and $84.0 \%$ of nights spent (Graph 4).

In 2022, the largest share of arrivals and nights spent by non-residents in hotels, similar establishments, shortstay accommodation establishments and tourist campsites is recorded by customers (guests) whose country of residence is in Europe ( $83.9 \%$ of arrivals and $91.0 \%$ of nights spent) with a significant contribution from the EU Members States (58.7\% of arrivals and 62.9\% of nights spent) (Tables 6 and 7).

The greatest contribution concerning arrivals is recorded for Germany (14.9\% of arrivals and 18.7\% of nights spent) and for France ( $7.8 \%$ of arrivals and $6.7 \%$ of nights spent). As regards the rest of the European countries, the greatest contribution is recorded for the United Kingdom (16.0\% of arrivals and $18.8 \%$ of nights spent) (Tables 5 and 6).

When comparing the data of arrivals and nights spent in hotels, similar establishments, short-stay accommodation establishments and tourist campsites by country of residence of the year 2022 with the corresponding data of the year 2021, a significant increase of arrivals, in absolute values, is recorded, among EU Members States, for Germany ( $38.8 \%$ in arrivals and $46.7 \%$ in nights spent), France ( $41.9 \%$ in arrivals and $47.4 \%$ in nights spent) and Italy (90.5\% in arrivals and 98.9\% in nights spent).

As regards the other European countries an increase of arrivals, in absolute values, is recorded for the United Kingdom (220.6\% in arrivals and $249.6 \%$ in nights spent) and Serbia ( $115.1 \%$ in arrivals and $110.7 \%$ in nights spent).

From the rest of the continents, a significant increase in arrivals, in absolute values, is recorded from America, and, in particular, for the United States of America (155.7\% in arrivals and $154.3 \%$ in nights spent) (Tables 5 and $6)$.

## EXPLANATORY NOTES

Arrivals and nights spent at hotels, similar establishments, tourist campsites and short stay accommodation establishments

Legal frame Reference unit

Reference period
Coverage
Geographical classification

Data on arrivals and nights spent at hotels, similar establishments and tourist campsites (NACE Rev. 2, 55.1 \& 55.3) are collected from a monthly census survey. Each establishment fills in a questionnaire, for every month that it is in operation. It is mandatory for all hotels, similar establishments and tourist campsites to participate in the survey.

Data on the arrivals and nights spent in short-stay accommodation establishments (NACE Rev.2,55.2), until reference year 2019, were collected through a sample survey. Specifically for reference year 2020 and 2021, due to the conditions formed by the Coronavirus disease (COVID-19), data were collected from the total of short-stay accommodation establishments in operation, for each month.

The survey is conducted pursuant to Regulation (EE) 692/2011 of the European Parliament and of the Council.
Data refer to all establishments (hotels, similar establishments and tourist campsites) that are registered in the Hellenic Chamber of Hotels, while for short-stay accommodation establishments (NACE Rev. 2, 55.2), data derive from the Statistical Register of short-stay accommodation establishments (rooms for rent) of ELSTAT, which is regularly updated by data of the Ministry of Tourism.

2022 (Final data).
The survey results refer to $100 \%$ of the total of the available bed-places.
The geographical classification is based on Nomenclature of Territorial Units for Statistics

Map of the 13 Regions (NUTS 2) of Greece

Definitions Resident: Every person, regardless of citizenship, that has resided in Greece for at least a year, or has arrived in Greece with the intention to reside in the country for at least 1 year

Non-resident: Every person, regardless of citizenship, that is not considered to be resident.
Arrivals: The arrivals at the establishments are calculated for every person separately. The data refer to the total number of persons and not to the total number of rooms that were occupied. Only the persons that had at least one overnight stay at the establishment are counted.
Nights spent: The nights spent are calculated for every person separately. The data refer to the total number of nights spent by every person and not to the total number of nights spent in every room.

Occupancy of bed-places: The monthly occupancy of bed-places is calculated on the basis of the number of the bedplaces, as reported by each establishment. The rate refers to the occupancy that was accomplished, as compared with the maximum occupancy that is expected according to the available bed-places.

The occupancy of the period is the result of the average occupancy rates of every month of the period, weighted by the bed-places that were in operation for each month.

Data collection during
the pandemic period
of coronavirus disease (COVID-19)
of operation. The questionnaires are mostly submitted electronically, via ELSTAT's electronic application "Xenios Zeus" or, alternatively, for establishments that this is not possible, in paper form.
The survey is based on the Statistical Register of hotels, similar establishments and tourist campsites, which is updated during the year, so that data refer to the actual number of accommodation establishments and campsites that are in operation.

Non-response to the survey is addressed as follows:

1. Regular reminders are sent out to the establishments that have not responded to the survey, for submitting data.
2. For the low percentage of establishments, which despite the reminders have not responded to the survey, supplementary administrative data are used and statistical methods are applied for grossing-up of the results to the total of establishments.

For short stay accommodation establishments (NACE Rev. 2, 55.2), until reference year 2019, data were collected through a sample survey with reference unit the short-stay accommodation establishment, through special electronic or paper questionnaire, that were submitted for each operational month. The data refer to arrivals and nights spent of residents and non-residents on a monthly basis by country of residence of the guests.

The survey design (estimation of the sample size, selection of the sample units) was based on ELSTAT's Statistical Register of short-stay accommodation establishments, that is regularly updated by the according register of the Ministry of Tourism. For the survey design, the single stratified sampling method was applied. The stratification criteria of the short-stay accommodation establishments are: the Prefecture where the establishment is located, the class category of the establishment, the Degree of Urbanization (densely, intermediate and thinly populated area) of the Local Administrative Unit where the establishment is located and the size class of the establishment (based on the number of bedrooms).
Since 2020, for the compilation of final data of arrivals and nights spent in hotels, similar establishments and tourist campsites, both data collected by the survey and administrative data sources were used. Specifically,
a. the establishments of the Register of hotels and tourist campsites, were identified on the basis of administrative data for each reference period.
b. the survey was conducted on the afore-mentioned establishments
c. for the low percentage of accommodation establishments that were in operation but did not respond to the survey, statistical methods were used for addressing non-response by grossing-up the collected data to the $100 \%$ of the total of the available bed-places.
Especially for short stay accommodation establishments (NACE Rev.2, 55.2), for the compilation of data of arrivals and nights spent, both data collected by the survey and administrative data sources were used. In specific:
a. the establishments in operation for each reference month, were identified on the basis of administrative data
b. the survey was conducted on the short-stay accommodation establishments
c. for the percentage of the accommodation establishments that were in operation but despite the reminders, did not respond to the survey, statistical methods were used for addressing nonresponse by grossing-up the collected data to the $100 \%$ of the total of the establishments. For this purpose, the target population was stratified by the following stratification criteria: Prefecture that the establishment is located, Degree of Urbanization (densely, intermediate and thinly populated areas), coastal or non-coastal areas, class of the establishment (1 key, 2 keys, 3 or 4 keys and rest of establishments) and size of the establishments based on the number of rooms (0-5 rooms, 6-9 rooms, 10-16 rooms, 17 rooms and over).
It is noted that during reference years 2020 and 2021, not all establishments were in operation, due to the measures against the Covid-19 pandemic. Moreover, a small number of establishments were in operation for special purposes such as the accommodation of people in quarantine, public servants that were transferred for special reasons, etc. In such cases arrivals and nights spent were not recorded, as they are not in the scope of the survey (Regulation EU 692/2011).

References More information at a more detailed geographical level of the survey results on hotels, similar establishments and tourist campsites is available on the website of ELSTAT at: http://www.statistics.gr/en/statistics/-/publication/STO12/-

[^0]:     ${ }^{(2)}$ For reasons of statistical confidentiality regarding the protection of the identity of the surveyed units, data on tourist campsites in the Region of Voreio Aigaio have been included in the relevant data for the Region of Notio Aigaio.
