

PRESS RELEASE

INDEX OF PERSONS EMPLOYED IN RETAIL TRADE: 2nd quarter 2020, y-o-y increase 0.3%

The Hellenic Statistical Authority announces the indices of persons employed, as well as the indices of hours worked and gross wages and salaries in retail trade, with base year 2015=100.0, of which according to provisional data for the 2nd quarter 2020, is as follows:

- The overall index of persons employed in retail trade in the 2nd quarter 2020, compared with the corresponding index of the 2nd quarter 2019 increased by 0.3%, while compared with the corresponding index of the 1st quarter 2020 increased by 0.1% (Tables 1, 2).
- The index of hours worked in retail trade in the 2nd quarter 2020, compared with the corresponding index of the 2nd quarter 2019 decreased by 11.5%, while compared with the corresponding index of the 1st quarter 2020 decreased by 8.6% (Table 3).
- The index of gross wages and salaries in retail trade in the 2nd quarter 2020, compared with the corresponding index of the 2nd quarter 2019 decreased by 5.9%, while compared with the corresponding index of the 1st quarter 2020 increased by 8.0% (Table 4).

METHODOLOGICAL NOTES

Generally	The index of persons employed in retail trade is a quarterly index that was first compiled in 2004 with base year (b.y.) 2000=100.0, while the indices of hours worked, gross wages and salaries are quarterly indices that were first compiled in March 2016 with base year 2010=100.0.
Purpose of the index - definitions	<p>The purpose of the persons employed index is to show the development of employment in retail trade. The compilation of the index includes the number of persons employed in the enterprise irrespectively of their status (owners, partners and their family members) and the nature of their work (managers, sales persons and auxiliary staff) and irrespectively of whether they work on a provisional or seasonal basis, full time or part time, with or without remuneration.</p> <p>The purpose of the hours worked index is to show the development in the volume of work done in retail trade from the total of persons employed (employers, own-account workers, salaried employees, unpaid family workers). The total number of hours worked represents the aggregate number of hours actually worked for the output of the enterprise during the reference period (quarter). The index covers the hours actually worked during normal working hours, hours worked in addition to those, time which is spent at the place of work on tasks such as preparing the site and time corresponding to short periods of rest at the work place. It excludes hours paid but not actually worked such as for annual leave, holidays and sickness leave.</p> <p>The purpose of the wages and salaries index is to depict the development of the gross wages and salaries bill. Wages and salaries are defined as the total remuneration, in cash or in kind, payable to all persons counted on the payroll (including home workers), in return for work done during the accounting period, regardless of whether it is paid based on working time, output or piecework and whether it is paid regularly.</p>
Legal Framework	The compilation of the index of persons employed in retail trade is governed by Council Regulation (EC) No 1165/98 concerning short-term statistics, while the indices of hours worked, gross wages and salaries are governed by the Commission Regulation (EC) No 329/2009 amending Council Regulation (EC) No 1165/98. In addition, all the above indices are governed by the Regulation No 1893/2006 of the European Parliament and of the Council establishing the statistical classification of economic activities NACE Rev.2.
Reference period	Quarter.
Base year	2015=100.0.
Revision	Pursuant to the provisions of the Council Regulation No.1165/98 concerning "Short Term Statistics", the index is revised every five (5) years in years ending in 0 or 5.
Statistical classification	The NACE Rev.2 statistical classification of economic activities is used, in conformity with Regulation (EC) No 1893/2006 of the European Parliament and of the Council.
Geographical coverage	The indices cover the whole country, with data coming from 62 Regional Units.
Coverage of economic activities	The indices cover the economic activities with four-digit code (classes) from 4711 to 4799 of NACE Rev.2 statistical classification.
Statistical survey	For the compilation of persons employed, hours worked, gross wages and salaries in retail trade indices, 38,315 retail trade enterprises are included, listed in the Business Register of ELSTAT. These enterprises had an annual turnover (in year 2015) equal to or higher than 140,000 euro, from which; a random representative sample of 575 enterprises was therefore selected and surveyed.
Data collection, processing and imputation in the context of the COVID-19 pandemic	The compilation of the indices of the 2 nd quarter 2020 was based on data collected by enterprises and the use of an estimation method for the calculation of the missing data. Estimations on missing data were used at enterprise level, at group and stratum level (class), based on collected data by enterprises in the corresponding groups and classes. In the revised results of 1 st quarter 2020, published in the current Press Release, newly collected data by enterprises have been incorporated.
Calculating the indices	<p>The indices of persons employed, hours worked, wages and salaries in retail trade are calculated as moving base. Firstly, the moving base index is calculated by comparing the estimated value (number of persons employed, hours worked, wages and salaries) for the current quarter with the corresponding value of the previous quarter. Afterwards, the fixed base index for the current quarter is calculated by multiplying the moving base index by the fixed base index of the previous quarter.</p> <p>The hours worked index is reduced to a typical quarter of equal duration. To this end the hours worked estimates are multiplied by a suitable correction factor calculated by dividing the average quarterly</p>

number of working days in the given year by the number of the regular working days in the quarter under consideration.

Compiled index series Concerning the persons employed index, from the 1st quarter 2000 onwards, four time series are compiled as follows: 1) Overall Index, 2) Overall Index (excluding the persons employed in the automotive fuel sector), 3) Index of persons employed in the food sector and 4) Overall Index of persons employed in the non-food sector except automotive fuel.
Concerning, the time series of the hours worked, wages and salaries indices are compiled from 1st quarter 2010 onwards.

Publication of data The time series of the Index of persons employed in retail trade (2015=100.0) have being published since December 2018 (3rd quarter 2018), with revised data since 1st quarter 2000. The time series of the hours worked, and wages and salaries indices (2015=100.0) have been published since December 2018 (3rd quarter 2018), with retrospective data since 1st quarter 2010.

References More information on the methodology concerning the compilation and calculation of the index and for the time series is available on the ELSTAT website:
