

## PRESS RELEASE

### System of Health Accounts (SHA) of year 2018

The Hellenic Statistical Authority (ELSTAT) publishes statistical data for the year 2018 on the funding of Health expenditures at national level based on the System of Health Accounts manual SHA 2011 of the Organization for Economic Cooperation and Development (OECD). ELSTAT publishes SHA data on an annual basis, according to its obligations towards OECD and Eurostat <sup>1 2</sup>.

The total funding on current health expenditure in Greece as a percentage of Gross Domestic Product (GDP) for the year 2018 amounts to 7.72% compared to 7.97% for the year 2017.

The following table presents the percentage of total funding of health expenditure to GDP according to the European System of Accounts 2010 (ESA 2010), for the years 2014 to 2018:

Year	Total Funding on Health Expenditure (as a percentage of GDP)
2014*	7.85%
2015*	8.02%
2016*	8.21%
2017*	7.97%
2018	7.72%

\*Revised data

1. The legal framework for the compilation of SHA data is European Regulation (EU) 1338/2008 and the respective implementing Regulation 359/2015. After the voting of the above Implementing Regulation, ELSTAT is obliged to transmit SHA data to Eurostat and to International Organizations (OECD and World Health Organization).

2. The Department of Nursing of the National and Kapodistrian University of Athens undertook the study of health expenditures according to the OECD system, further to the Memorandum of Cooperation that was signed on 29/12/2010 between ELSTAT, the Ministry of Health & Social Solidarity and the National and Kapodistrian University of Athens.

Data on health expenditure are in accordance with the structure of the tables of the System of Health Accounts (methodology SHA 2011) and pertain to the following:

- **The financing of health providers by financing agencies** (consumption side – HF x HP)

The data refer to the financing from the sectors of the domestic economy (General Government excluding Social Security Funds (SSFs), SSFs, Households, Private Insurance companies and other expenditures by Non-Governmental Organizations (NGOs, the Church etc.)) to the providers of health services (hospitals, physicians, pharmacies, diagnostic centers, etc.) (Table 3 and Graphs 4 and 5).

- **The financing of health services by financing agencies and by health care activity** (demand side – HF x HC)

The data refer to the financing from the domestic economy sectors (General Government excluding SSFs, SSFs, households, private insurance companies and other expenditures (NGOs, the Church, etc.)) by health care activity (in-hospital treatment, rehabilitation services, long-term care, pharmaceutical and medical products, etc.). (Table 4).

- **The direction of the health expenditure by health providers and by health care activity** (supply side – HP x HC)

The data refer to the direction of the health expenditure by health provider (hospitals, physicians, pharmacies, diagnostic centers, etc.) and by health care activity (in-hospital treatment, rehabilitative care, long-term care, etc.). (Table 5 and Graph 6).

Total public funding on health expenditure decreased by 3.5 % in 2018 compared with the expenditures in the year 2017. Total private funding on expenditure increased by 3.7% in 2018 compared with 2017 (Table 3 and Graphs 1 & 2).

As regards the participation of the public sector in the total funding on health expenditure, a decrease is observed, from 60.5% in 2017 to 58.7% in 2018. The participation of private sector in the total funding on health expenditure increased from 39.1% in 2017 to 40.9% in 2018 (Table 2 and Graph 3).

It should be noted that the tables of the System of Health Accounts (SHA) for the years 2014-2018, are compiled according to the primary data that has been received by the corresponding financing agencies, taking into account (for the sector of General Government) the inclusion of the flow of payables. For more information related to the collection and the classification of the primary data for the compilation of SHA in Greece along with the user oriented quality report, users can access them either on ELSTAT's website or at the end of current Press Release. We also note that the data of Social Security Funds (SSFs)(HF.1.2) in category HC.7.1 is revised for the years 2009 to 2017 due to reassessment of the primary data.

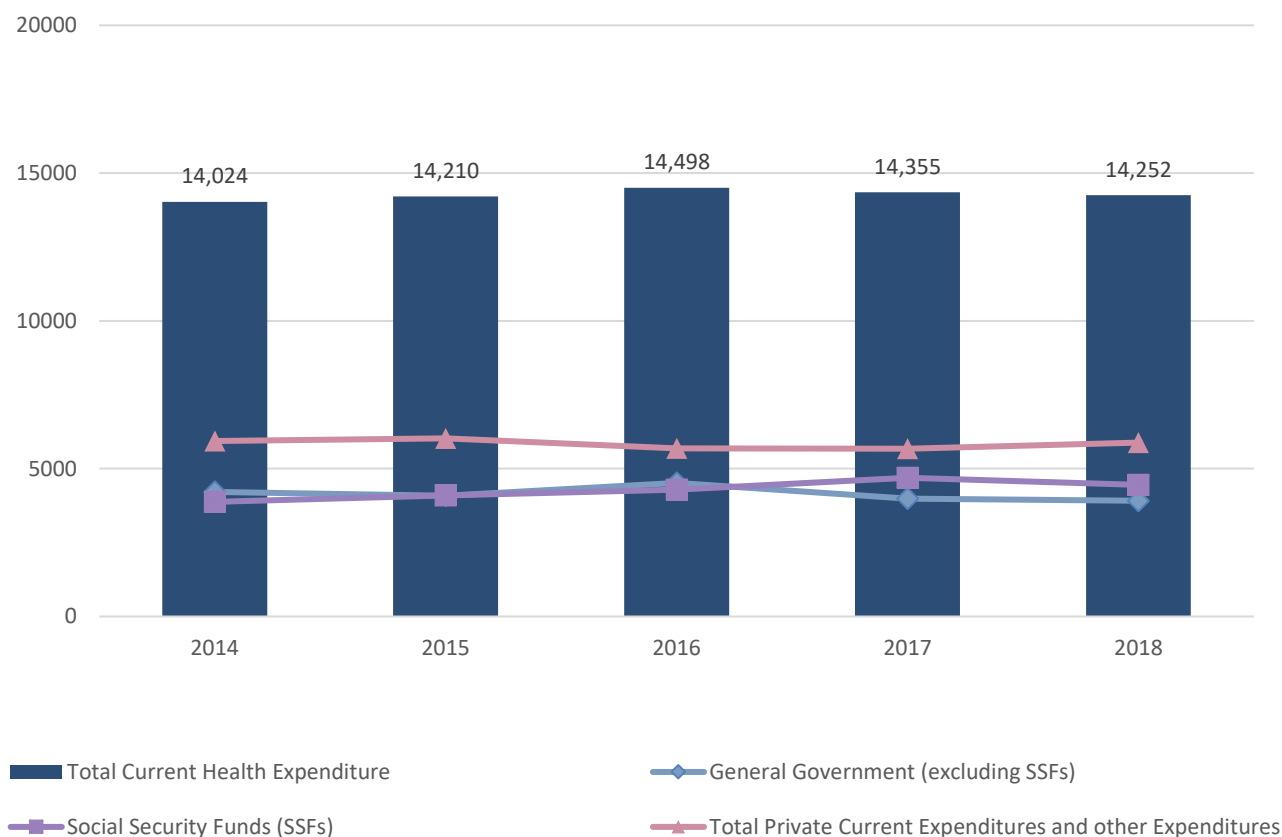

Table 1, presents the funding of sectors of General Government (Central Government, Social Security Funds (SSFs) and Local Government), Households, Private Insurance Companies, NGOs and Rest of the World on health expenditure.

## EXPLANATORY NOTES

<b>General</b>	Compilation of the System of Health Accounts (SHA) is performed on an annual basis. The legal framework for the compilation of SHA data is the European Regulation (EU) 1338/2008 and the respective Implementing Regulation 359/2015. After the voting of the above Implementing Regulation, ELSTAT is obliged to transmit SHA data to Eurostat and to International Organizations (OECD and World Health Organization).
<b>Methodology</b>	The basic concepts and classifications of the SHA are described in the respective manual (A System of Health Accounts 2011 Edition) aiming to ensure data compatibility and comparability among countries, to determine the total funding on health expenditure.
<b>Target</b>	<p>SHA is the system that determines the economic burden of every financing sector and the direction of health expenditure by health provider and by health care activity.</p> <p>Main purpose for the compilation of the System of Health Accounts is to determine the total funding of health care expenditure, which constitutes an essential piece of information for effective public policy-making in the health sector given that the health sector absorbs 8-10% of the GDP in most of the developed countries. As a consequence, the main purpose of recording health expenditure on the basis of the SHA is to achieve international comparability among similar aggregates of health expenditure adhering at the same time to the basic principle, which should govern the elaboration and implementation of any system of international accounts.</p>
<b>Sources</b>	The SHA (for Greece) was developed in line with the 'bottom-up' approach and following the funding agencies perspective. Health expenditure data were transmitted by the relevant Ministries (the Ministry of Health, the Ministry of Finance, the Ministry of National Defense, the Ministry of Culture & Sports, the Ministry of Education and Religious Affairs and the Ministry of the Interior), by the National Organization for Healthcare (EOPYY), by the Hellenic Association of Insurance Companies (EAEE), by Authorities of Local Administration, by Individual Non-Governmental Organizations, by the Church of Greece, by the Household Budget Survey (HBS) conducted by ELSTAT etc. It is noted that in order to avoid any classification errors and inconsistencies among the various financing agencies the funding agencies were not asked to fill in a standard questionnaire where they would have to classify their health expenditure.
<b>Classification</b>	The data were classified at 2-digit level of SHA codes, which fully satisfies the requirements, set out by the international organizations. In addition, for national purposes, the financing agencies, the health providers and the health care functions were also classified at lower level of analysis. Furthermore, the SHA health care functions codes (HC) were correlated and matched with the codes of the international Classification of the Functions of Government- COFOG.
