Annual Agricultural Statistical Survey The Hellenic Statistical Authority (ELSTAT) has been conducting the Annual Agricultural Statistical Survey since 1961 with the aim of collecting the basic characteristics of agriculture and livestock. The survey is conducted at local community level on a census basis.

Purpose of the survey The purpose of the survey is to collect statistical data on the cultivated areas under several crops, the number of animals and poultry, the production of agricultural and livestock products, as well as the agricultural machinery. The data are used for shaping the agricultural policy of the country and they also cover other national and international needs and obligations for statistical information.

Legal Framework The legal framework for the conduct of the Annual Agricultural Statistical Survey is the Royal Decree No 111/15-2-1962 and the Joint Ministerial Decisions No 8710/C2-1246/5-8-2010 and 2198/C2-248/24-2-2012 signed by the Minister of National Economy and the Deputy Minister of Interior, Public Administration and Decentralization, as well as the relevant decision of the President of ELSTAT issued annually, on the approval, procurement, assignment and cost allocation for conducting the Annual Agricultural Statistical Survey and approval for using private bodies for the conduct of the survey and their remuneration.

Reference Period – The reference period for crops is the 2024 calendar year.
– The reference date, as far as livestock is concerned, is December 31 of 2024.

Methodology and Coverage ELSTAT is conducting the survey with the cooperation of the Central and Regional Services of the Ministry of Rural Development and Food, the Greek Payment Authority of Common Agricultural Policy Aid Schemes (OPEKEPE), the Directorates of Rural Economy and Veterinary Medicine of the second level of Local Government (Regions), the Departments of Agriculture of the first level of Local Government (Municipalities), as well as owners of large agricultural holdings.
The collection of data and the data entry are carried out using a questionnaire in the form of an electronic workbook (excel).
The statistical unit of the survey is the territorial area included within the administrative boundaries of each Municipal Unit of the Country, according to the "Kleisthenis Plan". The survey covers the total of the above administrative subdivisions, except for the region of Mount Athos, for which no relevant data are collected.
The persons responsible for the collection and cross-checking of the data are private enumerators having agricultural sciences.
More detailed information on the survey methodology can be found in the document entitled "Single Integrated Metadata Structure (SIMS v2.0) (2021 – 2024)", which is posted on the ELSTAT website, under the same thematic section as this statistical release.
