# **ENVIRONMENTAL TAXES BY ECONOMIC ACTIVITY: year 2023**

The Hellenic Statistical Authority (ELSTAT) announces data on environmental tax revenues for the year 2023 and revised data for the period 2014-2022. Data are collected from administrative sources.

The data presented in this announcement refer to total environmental taxes and relevant subcategories of taxes (energy taxes, transport taxes, pollution taxes and resource taxes) payable by sectors of economic activity (according to the NACE Rev.2 classification), households and non-residents.

## **Total Environmental Taxes**

In 2023, total Environmental Tax Revenue (ETR) amounted to 9,257.0 million euros presenting a decrease of 20.4% compared with 2022 (Tables 1-2, Graphs 1-2).

Environmental tax revenue accounted for 10.6% of total Taxes and Social Contributions (TSC) in the Greek economy, decreased by 3.1 percentage points compared with 2022 (Table 3, Graph 3).

#### Information for data provision:

Tel: 213 135 2022, 2308, 2310 E-mail: data.dissem@statistics.gr With reference to the entities that paid the environmental taxes in 2023, the economic activities contributed a total of 6,184.6 million euros representing 66.8% of the total environmental tax revenue while households and non-residents paid 3,072.4 million euros representing 33.2% of ETR (Tables 1 and 4, Graphs 2 and 4).

The percentage distribution of environmental tax revenue by sector of economic activity, households and non-residents for the years 2022 and 2023 are presented in Table 4 and Graph 4.

## **Energy taxes**

In 2023, energy taxes amounted to 7,547.0 million euros decreased by 24.4% compared with 2022 (Tables 1 and 2, Graph 1). Energy taxes accounted for the largest part of environmental taxes in 2023, with a share of 81.5% (Table 3).

The significant decrease in energy taxes during the reference year 2023, is mainly due to the abolition of the "Temporary Mechanism for the return of part of Day-Ahead and Intraday Market Revenues", which was in effect from July 1<sup>st</sup>, 2022, to June 1<sup>st</sup>, 2023. This tax involved withholding a portion of the revenues of electricity producers and suppliers and was fully attributed to the economic activity sector "D35 - Electricity, gas, steam, and air conditioning supply". In the reference year 2023, this tax amounted to 703.0 million euros (2,889.0 million euros in 2022).

In 2023, the economic activities paid in total 5,547.0 million euros in energy taxes, while households and non-residents contributed the amount of 2,000.0 million euros (Table 1).

### **Transport taxes**

In 2023, transport taxes were 1,681.0 million euros, increased by 6.9% compared to 2022 (Tables 1 and 2, Graph 1). Transport taxes accounted for 18.2% of total environmental taxes in 2023 (Table 3).

Households and non-residents paid 1,044.9 million euros while economic activities paid the remaining amount of 636.1 million euros (Table 1).

## Pollution and resource taxes

In 2023, pollution and resource taxes amounted to 29.0 million euros, presenting 0.3% of total environmental tax revenue in 2023 (Tables 1 and 3, Graph 1).

Regarding the entities that paid the pollution and resource taxes in 2023, households and non-residents contributed 27.5 million euros while economic activities paid the remaining amount of 1.5 million euros (Table 1).

### **EXPLANATORY NOTES**

#### Legal framework:

The Environmental Taxes Accounts are compiled pursuant to Regulation 691/2011 of the European Parliament and of the Council (Section 1) which provides for and lays down the methodological frame for the compilation the accounts.

An environmental tax is defined by Regulation (EU) 691/2011 as: "A tax whose tax base is a physical unit (or a proxy of a physical unit) of something that has a proven, specific negative impact on the environment, and which is identified in ESA 95 as a tax."

#### Methodology:

For analytical purposes, the environmental taxes are divided into four categories:

- 1. energy taxes (including CO<sub>2</sub> taxes)
- 2. transport taxes
- 3. pollution taxes
- 4. resource taxes (excluding taxes on oil and gas extraction)

The main source of primary data on environmental taxes is the National Tax List provided by ELSTAT's National Accounts Division and the annual Tax Revenue Report of the Independent Authority of Public Revenue (AADE). Data are presented by certain aggregated industries of the Statistical Classification of Economic Activities (NACE Rev.2) and households.

Possible small deviations in sums are due to rounding.

# Concepts and Definitions:

Environmental Taxes Accounts include the following taxes:

- 1. Energy Taxes (including fuel for transport): This category includes taxes on energy production and on energy products used for both transport and stationary purposes. Carbon dioxide (CO<sub>2</sub>) taxes are included under energy taxes rather than under pollution taxes.
- 2. Transport Taxes (excluding fuel for transport): This category mainly includes taxes related to the ownership and use of motor vehicles. Taxes on other transport equipment (e.g. planes, ships or railway stocks) and related transport services (e.g. duties on charter or scheduled flights), are also included here, when they conform to the general definition of environmental taxes. The transport taxes may be 'one-off' taxes related to imports or sales of the equipment or recurrent taxes such as an annual road tax.
- 3. <u>Pollution Taxes</u>: This category includes taxes on measured or estimated emissions to air and water, management of solid waste and noise. An exception is the CO<sub>2</sub>-taxes, which are included under energy taxes.
- 4. <u>Resource Taxes</u>: This category includes taxes linked to the extraction or to the use of natural resources, such as water, forests, wild flora and fauna, etc., as these activities deplete natural resources.

<u>Taxes paid by non-residents</u>: refer to taxes paid by a) non-resident households (e.g. transport fuels purchased by leisure tourists), b) non-resident companies (e.g. fuels purchased by airlines and business travelers), c) foreign governments (e.g. military bases or embassies) etc.

<u>Social contributions</u>: are the actual contributions made by households to social insurance schemes to make provision for social benefits to be paid.
