#### METHODOLOGICAL NOTES

Generally The Consumer Price Index (CPI) is compiled by the Hellenic Statistical Authority (ELSTAT) since 1959. Until the year

2000, the CPI referred to the urban areas of the Country, while from 2001 onwards it refers to the whole Country covering urban, semi-urban and rural areas.

The purpose of the CPI is to measure the general level of prices of goods and services purchased by the average Greek Purpose of the index

household.

Law 3832/2010. **Legal basis** 

Reference period Month.

> December of the previous year. Base

2020=100.0. Reference year

The CPI index follows the chain linking method, introducing new weights annually and having as a base the December **Chain linking Index** 

of the previous year. The weights are estimated on the basis of the most recent available data of the Household Budget Survey (HBS), extrapolated to the prices of December. The CPI, adjusted on an annual basis to the most recent consumption expenditure pattern of the private households of the Country, ensures the representativeness of goods

and services, which compose the "basket" of purchases of the average household.

**Geographical and** population coverage of

the CPI

The CPI refers to the whole Country and covers the resident households of the territory excluding collective households (hospitals, homes for the elderly, boarding houses, prisons, etc.) and non-resident households (tourists) in the Country.

Classification of items The classification of the CPI items (goods and services) is based on the international classification COICOP (Classification

of Individual Consumption by Purpose) as this has been adapted to the needs of the HICPs of the EU Member States

with the COICOP5/HICP classification.

Weights of items The weights of CPI items are updated every year, on the basis of the most recent available data of HBS. The weights

are calculated as the share (‰) of the expenditures for each group, subgroup and item (good or service) to the total

household expenditure of the average household.

Price collection Cities The CPI prices are collected in 27 cities with representative markets for the coverage of the 13 Regions of the Country.

The selection criteria of the price collection cities are the size and the particularities of their markets, the possibility of

continuous price collection, the comparability of the index and the cost of price collection.

Population weights The calculation of the population weights by regions is based on the population data of the 2021 General Population

Census and the expenditure data of the latest available HBS by regions.

Selection of items The composition of the "household basket" i.e. the selection of goods and services which are included in the calculation

> of CPI is updated annually, using the results of the latest available HBS, other market research, etc. The chain linking methodology allows the change of items of the household basket on an annual basis, in order to ensure the

representativeness of the items involved in the calculation of groups and subgroups of CPI.

**Price collection-Outlets** The prices collection outlets are retail stores, enterprises providing services, street markets etc. which are considered

> representative of the branches of shops, where the households make their purchases in the 27 selected cities. The methodology allows the renewal of price collection sources, annually, in order to maintain their representativeness in the calculation of CPI. Prices are collected by employees of ELSTAT as well as by external price collectors, hired on a temporary basis. They pay a visit to the selected outlets within a specific time period of a month (monthly prices) or on a specific day of the week (weekly prices). The collected prices correspond to the prices actually faced by the

consumer.

Specification-

All the collected items are defined by the specification, that is the particular characteristics which determine the **Substitution of items** quality, the trade show and the identity, in general, of good products (such as brand, weight, package etc), in order to avoid any price variations attributable to differences in the specification. Once a specified item (good or service) is no longer available in the market or has ceased to be important, as regards consumption, it is substituted by a newly

specified item, which has taken its place in the market.

## Calculation of the Consumer Price Index

The Consumer Price Index is a Laspeyres-type index and it is calculated based on December of the previous year.

Implementation of formula in five-digit level of COICOP5

Specifically, if the five-digit item h includes q price collected items, then its index in month t of year T,  $R_h^{t,T}$ , is given by the following formula:

$$R_{h}^{t,T} = R_{h}^{12,T-1} \left[ \frac{\sum_{i=1}^{q} w_{i}^{T} R_{i}^{t,T} / R_{i}^{12,T-1}}{\sum_{i=1}^{q} w_{i}^{T}} \right],$$

where:

 $R_{\perp}^{12,T-1}$  = the index of the five-digit item h, in December of year T-1.

 $\mathbf{W}_{:}^{\mathrm{T}}$  = the weight of the price collected item I, in year T.

 $\mathbf{R}^{t,T}$  = the index of the price collected item I, in month t of year T.

 $R_{:}^{12,T-1}$  = the index of the price collected item I, in December of year T-1.

A similar methodology is followed for the calculation of indices in the upper levels (two-digit, three-digit and four-digit) of COICOP5 and the calculation of the overall CPI as well.

## **Publication of data**

The published CPI time series (reference year 2020=100.0), covers the period from January 1959 onwards. The CPI data are released each month as scheduled, in accordance with the Releases Calendar of ELSTAT, with the Release and the tables.
