

TURNOVER INDEX IN RETAIL TRADE: November 2023, y-o-y increase 0.6%

The Hellenic Statistical Authority (ELSTAT) announces the Turnover and Volume Indices in Retail Trade with base year 2015=100.0 for November 2023, the evolution of which, according to provisional and reduced data to a typical month, is as follows:

- The Overall Turnover Index in Retail Trade in November 2023 increased by 0.6%, compared with the corresponding index of November 2022, while compared with the corresponding index of October 2023 decreased by 1.0% (Table 1).
- The Overall Volume Index in Retail Trade (i.e., turnover in retail trade at constant prices) in November 2023, decreased by 5.2%, compared with the corresponding index of November 2022, while, compared with the corresponding index of October 2023, decreased by 0.6% (Table 2).
- The seasonally adjusted Overall Turnover Index in November 2023, compared with the corresponding index of October 2023, increased by 2.1% (Table 5).
- The seasonally adjusted Overall Volume Index in November 2023, compared with the corresponding index of October 2023, increased by 1.6% (Table 5).

Graph 2. Evolution of the Overall Turnover Index in Retail Trade (2015=100.0)

Graph 3. Evolution of the Overall Volume Index in Retail Trade (2015=100.0)

It should be noted, that the timeseries of the seasonally adjusted index is recalculated every time a new observation is added and could differ from 100 for the base year, as seasonal effect is not the same each year. Therefore, the seasonally adjusted data differ from the published data of the Announcement of the previous month.

Table 1. Annual and monthly rates of change of Turnover Index in Retail Trade
(Data adjusted for working days)

Base year: 2015=100.0

Retail Trade Store Categories	Turnover Index				
	November 2023*	November 2022	October 2023**	Annual rates of change (%)	Monthly rates of change (%)

Graph 4. Monthly rates of change (%) of the seasonally adjusted Volume Indices in Retail Trade for November/ October 2023

Generally	The Retail Trade Turnover Index is a monthly index, which was released in 2006 for the first time, with base year (b.y.) the year 2005=100.0. This index is a continuation of the Retail Sales Value Index, which had been compiled since 1963.
Purpose of the index – definitions	The purpose of the index is to depict the evolution of the goods and services market. Turnover comprises the total amounts invoiced by the enterprise during the reference period which correspond to the resale of goods without any further transformation. The data collected each month refer to the actual sales (both retail and wholesale) excluding VAT but including other duties and taxes on the goods.
Legal Framework	The compilation and publication of the Turnover Index is based on the framework of the implementation of Council Regulation (EC) No 1165/1998 concerning short-term statistics (STS-R), as well as Regulation (EC) No 1158/2005 of the European Parliament and of the Council amending Council Regulation (EC) No 1165/1998. Furthermore, this index is governed by Regulation (EC) No 1893/2006 of the European Parliament and of the Council, by Commission Regulation (EC) No 656/2007, by Regulation (EC) No 451/2008 of the Council, by Regulation (EU) No 2019/2152 of the European Parliament and of the Council on European business statistics, as well as Commission Implementing Regulation (EU) No 2020/1197 laying down technical specifications and arrangements pursuant to Regulation (EU) No 2019/2152.
Reference period	Month.
Base year	2015=100.0.
Revision	Pursuant to the provisions of the Council Regulation No 1165/98 concerning “Short Term Statistics”, the index is revised every five (5) years in years ending in 0 or 5. The purpose of the revision is to adapt the index to the changes in the structure of retail trade.
Statistical classification	The NACE Rev.2 statistical classification of economic activities is used in conformity with Regulation (EC) No 1893/2006 of the European Parliament and of the Council.
Geographical coverage	The index covers the whole of the country with data coming from 72 Regional Units.
Coverage of economic activities	The index covers the codes from 4711 to 4799 of the division 47 of NACE Rev 2 statistical classification of economic activities.
Statistical survey	The index includes 38,444 retail trade enterprises, with an annual turnover (in year 2015) equal or greater than 140,000€, from which a random representative sample of 1,674 enterprises was therefore selected and surveyed.
Volume Index	Since 2005, a parallel calculation of the retail trade volume index is introduced, for measuring the volume changes in retail trade.
Calculating the indices	<p>The turnover index is calculated by applying the chaining method. Firstly the moving base index is calculated by comparing the estimated turnover value for the current month with the corresponding value of the previous month. Afterwards, the fixed base index for the current month is calculated by multiplying the moving base index by the fixed base index of the previous month.</p> <p>The comparability of the indices is achieved by reducing them to indices of a typical month of equal duration. This is implemented through the multiplication of the estimated turnover values by a specific correcting coefficient that results, by dividing the average monthly number of working days in the current year, by the number of the regular working days of the surveyed month.</p> <p>The Volume Index (since September 2018) is calculated by deflating the Retail Trade Turnover Index, with the use of the Harmonized Index of Consumer Prices at Constant Tax rates (HICP-CT) as a deflator.</p>
Seasonal Adjustment	Seasonal adjustment is the procedure followed to remove the impact of seasonality on the timeseries (that is eliminating the monthly effects, e.g: the beginning of the school year, holidays, tourist period, etc) in order to improve the comparability over time. The seasonal adjustment is performed by the application of TRAMO-SEATS method with the use of JDemetra+ 2.0.0. The whole series with seasonally adjusted indices is recalculated every time a new observation is added.
Compiled index series	<p>Due to the implementation of the classification NACE Rev 2. parallel time-series for the indices including and not including the automotive fuels are provided.</p> <p>These timeseries data are also compiled seasonally adjusted.</p>
Publication of data	Timeseries of Retail Trade Turnover and Volume Indices (b.y. 2015=100.0) are released monthly since September 2018, with retrospective data from 2000, into the following categories of economic activity classes:

Supermarkets

Non-specialized stores with food, beverages or tobacco predominating.

Department stores

Other retail sale in non-specialized stores.

Food, beverages, tobacco
