Data collection, processing and imputation in the context of the COVID-19 pandemic The compilation of the indices was based on data collected by enterprises and the use of an estimation method for the calculation of the missing data on the basis of the rate of changes of the values collected by enterprises, at section of economic activity and stratum level (class). For the 2nd quarter 2020, the response rate of the enterprises was lower compared to the corresponding response rate of the 2nd quarter 2019 by approximately 6%.
