

Piraeus, 9 June 2023

INDUSTRIAL PRODUCTION INDEX: April 2023, y-o-y increase of 4.2%

The Hellenic Statistical Authority announces the Industrial Production Index (IPI) with base year 2015=100.0 for April 2023, the evolution of which, on the basis of provisional and working day adjusted data, is as follows:

The Overall Industrial Production Index in April 2023 recorded an increase of 4.2% compared with April 2022. The Overall IPI in April 2022 decreased by 4.7% compared with the corresponding index in April 2021 (Table 1).

The average Overall Industrial Production Index for the period from January to April 2023 recorded an increase of 2.4% compared with the average IPI of the period from January to April 2022 (Table 2).

The seasonally adjusted Overall Industrial Production Index in April 2023 recorded a decrease of 1.9% compared with the corresponding index of March 2023 (Table 4).

The index of machinery and equipment n.e.c. recorded the greatest percentage decrease, whereas the index of vehicles, trailers and semi-trailers division showed the greatest percentage increase in April 2023 compared with March 2023. Comparing the indices of April 2023 with the corresponding indices of April 2022, the greatest percentage increase was recorded in leather and related products division, while the highest percentage decrease was recorded in mining of coal and lignite – extraction of crude petroleum and natural gas – mining support service activities division (Tables 1 and 4).

Evolution of the Industrial Production Index in April 2023

I. Annual changes: April 2023 / April 2022 (Table 1)

The 4.2% increase of the working day adjusted Overall IPI in April 2023, compared with the corresponding index in April

2022, is due to the annual changes of the sub-indices in the following industrial sections:

1. Increase of:

9.9% in the Electricity Supply Index

9.2% in the Mining and Quarrying Index. The increase was the result of the annual changes of the sub-indices in the

following 2-digit divisions: mining of metal ores, other mining and quarrying.

3.2% in the Manufacturing Index. The increase was mainly the result of the annual changes of the sub-indices in the

following 2-digit divisions: leather and related products, basic pharmaceutical products and pharmaceutical

preparations, tobacco products, beverages, coke and refined petroleum products.

2. Decrease of:

1.7% in the Water Supply Index.

II. Rates of change of the average index of the period January - April 2023 compared with the corresponding index of the

period January - April 2022 (Table 2)

The 2.4% increase of the working day adjusted average Overall IPI in the 4-month period January - April 2023, compared

with the corresponding index in January - April 2022, is due to the corresponding rates of change of the sub-indices in the

following industrial sections:

1. Increase of:

14.0% in the Mining and Quarrying Index

6.7% in the Manufacturing Index.

2. Decrease of:

1.0% in the Water Supply Index.

13.9% in the Electricity Supply Index.

III. Monthly changes: April 2023 / March 2023 (Table 4)

The 1.9% decrease of the seasonally adjusted Overall IPI in April 2023, compared with the corresponding index in March

2023 is due to the monthly changes of the sub-indices in the following industrial sections:

1. Decrease of:

7.0% in the Mining and Quarrying Index.

5.0% in the Manufacturing Index.

1.6% in the Water Supply Index

2. Increase of:

7.2% in the Electricity Supply Index.

2

The following graphs depict the annual rates of change (y-o-y) of the Industrial Production Index and the Manufacturing Index, the evolution of the seasonally and non-seasonally adjusted Overall Industrial Production Index, as well as the monthly rates of change (m-o-m) of the seasonally adjusted index.

It should be noted that the time series with the seasonally adjusted indices is recalculated every time a new observation is added in the time series. Therefore, the seasonally adjusted data differ from the data published in the previous Announcement.

The following graphs depict the evolution of the seasonally adjusted Industrial Production Index and the Main Industrial Groupings, as well as the evolution of the Industrial Production Index and the Industrial Sections Indices.

Notes

^{1.} The indices are rounded up to two decimal digits when published and percentage changes up to one decimal digit when published.

^{2.} The whole time-series with seasonally adjusted indices is recalculated every time a new observation is added in the time-series.

^{3.} The composed index of divisions 05-06-09 is not seasonally adjusted.

Notes:

^{1.} The indices are rounded up to two decimal digits when published and percentage changes up to one decimal digit when published.

^{2.} The whole time-series with seasonally adjusted indices is recalculated every time a new observation is added in the time-series.

METHODOLOGICAL NOTES

Generally

The Industrial Production Index (IPI) in Greece has been compiled by the Hellenic Statistical Authority (ELSTAT) from 1959 onwards.

Purpose of the index

The objective of the index is to compare the magnitude (volume) of the output in the current month in the mining and quarrying, manufacturing, electricity and water supply divisions with the corresponding output of a given fixed period, which is considered as base period. The Industrial Production Index shows the evolution of the value added of the production factors cost, at constant prices.

Legal framework

The compilation of the IPI is based on the framework of the implementation of Council Regulation (EC) No 1165/1998 concerning short-term statistics (STS-R). Furthermore, the IPI is governed by Regulation (EC) No 1893/2006 of the European Parliament and of the Council, by Commission Regulation (EC) No 656/2007, by Council Regulation (EC) No 451/2008, by Regulation (EU) No 2019/2152 of the European Parliament and of the Council on European business statistics, as well as Commission Implementing Regulation (EU) No 2020/1197 laying down technical specifications and arrangements pursuant to Regulation (EU) No 2019/2152.

Reference period Month.

> 2015=100.0. Base year

Revision The IPI is a fixed base index. The Industrial Production Index was currently revised with new base year 2015 (2015=100.0) according to the provisions of Council Regulation No 1165/1998 concerning short-term statistics. Short-term indices are revised every five (5) years, particularly in calendar years ending in 0 or 5.

At the level of branches of economic activities, the statistical classification of economic activities NACE Rev.2 Statistical of EU was used (Regulation No 1893/2006), while at the level of main industrial groupings, the allocation of

two-digit and three-digit NACE Rev. 2 headings to categories of aggregate classification was used, in

accordance with Council Regulation No 656/2007. At product level, the statistical classification CPA 2008 of EU was used, according to Council Regulation No 451/2008.

Geographical coverage The index covers the whole Country.

Coverage of economic The index covers all the sections of industry, the main industrial groups, as well as all levels of economic

The data are collected from a sample of 1,263 enterprises. The survey covers 325 products and the measurement of the surveyed products is made in terms of output quantities or in terms of production value or turnover, according to the specific features in each branch of economic activity.

Seasonal adjustment is the procedure followed to remove the impact of seasonality on the time-series (i.e. the impact of monthly effects, e.g. holidays, tourist period etc.), in order to improve comparability over time. The method applied is TRAMO-SEATS with the use of JDemetra+ 2.0.0.

For the seasonal adjustment of the Industrial Production Index at 2-digit level of NACE Rev.2, at section level (B - Mining and Quarrying, C - Manufacturing, D - Electricity and E - Water Supply) and for the Main Industrial Groupings (MIGs), the direct approach is applied, namely each time-series is seasonally adjusted independently. For the overall Industrial Production Index, the indirect approach is applied, with the seasonally adjusted IPI being computed by aggregating the seasonally adjusted MIGs using appropriate weights.

The revised IPI with the new base year 2015 (2015=100.0) is released since July 2019, with May 2019 as the first reference month. Data with base year 2015=100.0 are available from January 2000 onwards.

More information about the methodology concerning the compilation and calculation of the index and the time series are available on the website of the Hellenic Statistical Authority (ELSTAT) (http://www.statistics.gr/en/statistics/-/publication/DKT21/-).
