3.1 Data description		
<p>The survey on "income and living conditions" covers four topics: main indicators, income distribution and monetary poverty, living conditions, material deprivation and childcare arrangements indicators, which are again structured into collections of indicators on specific topics.</p> <p>The collection "main indicators" houses those indicators provided under the Open Method of Coordination in the area of combating poverty and social exclusion. This group of indicators houses the following three collections: the overarching portfolio of indicators, the social inclusion portfolio and the pension's portfolio.</p> <p>The collection "income distribution and monetary poverty" houses collections of indicators relating to poverty risk, poverty risk of working individuals, income of people at risk of poverty as well as the distribution of income.</p> <p>The collection "living conditions" hosts indicators relating to characteristics and living conditions of households, characteristics of the population according to different breakdowns, health and labour conditions as well as housing conditions.</p> <p>The collection "current household income" covers indicators relating to financial and income parameters and "material deprivation" gives information on lack of specific goods and services in comparison with the countries of the European Union.</p>		
3.2 Classification system		
<p>The EU-SILC results are produced in accordance with the relevant international classification systems. The main classifications used are:</p> <ul style="list-style-type: none"> ISCED 2011 for the level of education, ISCO 08 (COM) from 2010 for occupation and NACE (Rev. 2 from 2008) for economic activity 		
3.3 Sector coverage		
3.4 Statistical concepts and definitions		
<p>Income:</p> <p>The total disposable income of a household is calculated by adding together the personal income received by all household members plus income received at household level. Missing income information in individual questionnaires is imputed.</p> <p>Disposable household income includes:</p> <ul style="list-style-type: none"> -all income from work (employee wages and salaries and self-employment earnings) -private income from investment and property -transfers between households -all social transfers received in cash including old-age pensions <p><u>Note:</u> Some of the income components are mandatory only from 2007: Imputed rent, Interest paid on mortgage, Value of goods from own consumption, Employer's social insurance contributions. From 2007</p>		

onwards, all countries have to supply gross income information.

Equivalence scale:

To take into account the impact of differences in household size and composition, the total disposable household income is "equivalised". The equivalised income attributed to each member of the household is calculated by dividing the total disposable income of the household by the equivalisation factor.

Equivalisation factors can be determined in various ways. Eurostat applies an equivalisation factor calculated according to the OECD-modified scale first proposed in 1994 - which gives a weight of 1.0 to the first person aged 14 and over, a weight of 0.5 to other persons aged 14 and over and a weight of 0.3 to persons aged 0-13.

Household definition:

A 'private household' means "a person living alone or a group of people who live together in the same private dwelling and share expenditures, including the joint provision of the essentials of living". EU-SILC implementing regulation number 1983/2003 on updated definitions, defines households in terms of sharing household expenses and (for non-permanent members) in terms of duration of stay and (for temporarily absent members) in terms of duration of absence.

Household type:

A common classification was developed by Eurostat for use in data collection surveys including ECHP, LFS, HBS and EU-SILC as well as the subsequent presentation of indicators relating to income, housing, education, healthcare, etc. Rather than focusing on "couples" and/or "families", the classification is constructed by reference to the numbers of adult members, their age and gender, and the numbers of dependent children living with them. This is reproduced below:

Type of household

- Total
- All households without dependent children
- Single person household
- One adult male
- One adult female
- One adult older than 65 years
- One adult aged between 0 and 64 years
- Two adults, no dependent children, younger than 65 years
- Two adults, no dependent children, at least one aged 65 years and over
- Three or more adults, no dependent children
- All households with dependent children
- Single parent with a least one dependent child
- Two adults with one dependent child
- Two adults with two dependent children
- Two adults with three or more dependent children
- Three or more adults with dependent children

Dependent children were previously defined as all persons aged less than 16, plus those economically inactive persons aged 16-24 living with at least one of their parents. Now a slightly different definition has been adopted: All persons aged less than 18 are considered as dependent children, plus those economically inactive persons aged 18-24 living with at least one of their parents.

Activity status:

Under EU-SILC respondents are asked to declare the number of months of year spent in a list of activity statuses (cross-sectional part). From this information a "calendar of activities" can be constructed.

Note: Separate questions also allow the construction of an "ILO activity status".

Using the calendar of activities, the following classification of most frequent activity status is established:

Activity and/or professional status

- Employee (full-time)
- Employee (part-time)
- Self-employed (full-time)
- Self-employed (part-time)
- Unemployed
- Pupil, student, further training, unpaid work experience
- In retirement or in early retirement or has given up business
- Unfit to work
- Soldier
- Domestic tasks
- Other inactive person
- Person with permanent disability

For the 'in work poverty risk indicators', an individual is considered as having a particular activity status if he/she has spent time during the reference year in that status.

For the pensions indicator 'aggregate replacement ratio' only persons who have spent the total reported time in the relevant activity status are considered.

Education level:

Under EU-SILC, the attainment levels of individuals are classified according to the 'International Standard Classification of Education' version of 2011.

- Level 000 Less than primary education.
- Level 100 Primary education.
- Level 200 Lower secondary education.
- Level 300 Upper secondary education.
- Level 400 Post-secondary non-tertiary education.
- Level 500 Short cycle tertiary
- Level 600 Bachelor or equivalent
- Level 700 Master or equivalent.
- Level 800 Doctorate or equivalent.

Occupation:

Under EU-SILC, the occupational status of individuals is classified according to the 'International Standard Classification of Occupations' ISCO_08 (COM).

3.5 Statistical unit

Household and household members

3.6 Statistical population

- The survey covers all the private households throughout the country, irrespective of their size or

<p>socio-economic characteristics. The following were excluded from the survey:</p> <ul style="list-style-type: none"> • Institutional households of all types (boarding houses, elderly homes, hospitals, prisons, rehabilitation centers, camps, etc.) • Households with more than five lodgers and • Households with foreigners serving in diplomatic missions
3.7 Reference area
The whole country
3.8 Time coverage
Annual survey
3.9 Base period
The year of survey conduct, 2018

4. Unit of measure	Top
Most indicators are reported as rates. Some are reported in other units (e.g. numbers, monetary units, etc.)	

5. Reference period	Top
<p>In the Survey on Income and Living Conditions EU-SILC the following reference periods are mentioned:</p> <ul style="list-style-type: none"> • For rent, income taxes and contributions for insurance: • The current month (rent or imputed rent house) • The previous calendar year, ie for 2018, the reference year is 2017 (employees and self-employed income, social benefits, pensions, financial assistance to and from third parties, investment income, taxes, etc.) <p>For employment and unemployment:</p> <ul style="list-style-type: none"> • days of the survey (main occupation, marital status) • 2 weeks after the day of the survey (possibility of work) • 12 last month, before the day of the survey (job change) <p>For health:</p> <ul style="list-style-type: none"> • 12 last month, before the day of the survey (medical visits to a qualified doctor or dentist). 	

6. Institutional mandate	Top
6.1 Legal acts and other agreements	
<p>The legal framework concerning the organization and operation of ELSTAT is as follows:</p> <ul style="list-style-type: none"> ➤ Greek Statistical Law 3832/2010 as in force (Government Gazette No 38, Issue A): Regulation on the Operation and Administration of the Hellenic Statistical Authority (ELSTAT), 2012 (Government Gazette 2390 B, 28.08.2012), as amended by article 90 paragraphs 8 and 9 of the Law 3842/2010 (Government Gazette No 58, Issue A): “Restoration of fiscal justice, confrontation of tax evasion and other provisions”, by article 10 of the Law 3899/2010 (Government Gazette No 212, Issue A): “Urgent measures for the implementation of the assistance program of the Greek Economy”, by article 45 of the Law 3943/2011 (Government 	

Gazette No 66, Issue A): “Combating tax evasion, staffing of auditing services and other provisions falling within the competence of the Ministry of Finance”, by article 22 paragraph 1 of the Law 3965/2011 (Government Gazette No 113, Issue A): “Operations Reform of the Consignment and Loan Fund, Public Debt Management Agency, Public Enterprises and Government bodies, the establishment of the General Secretary of Public Property and other provisions” and by article 51 of the Law 4021/2011 (Government Gazette No 218, Issue A): “Enhanced measures for the supervision and restructuring of Credit Institutions – Regulation of issues of financial nature – Ratification of the European Financial Stability Facility (EFSF) Framework-Agreement and its amendments and other provisions.”

- Regulation (EC) No 223/2009 of the European Parliament and of the Council, on the European statistics (Official Journal of the European Union L 87/164).
- Article 14 of the Law 3470/2006 (Government Gazette No 132, Issue A): “National Export Council, taxregulations and other provisions”.
- Article 3, paragraph 1c, of the Law 3448/2006 (Government Gazette No 57, Issue A): “For the further use of information coming from the public sector and the settlement of matters falling within the responsibility of the Ministry of Interior, Public Administration and Decentralization”.
- European Statistics Code of Practice adopted by the Statistical Program Committee on 24 February 2005 and promulgated in the Commission Recommendation of 25 May 2005 on the independence, integrity and accountability of the national and Community statistical Authorities, after its revision, which was adopted on 28 September 2011 by the European Statistical System Committee.
- Presidential Decree 226/2000 (Government Gazette No 195, Issue A): “Organization of the General Secretariat of the National Statistical Service of Greece”.
- Articles 4, 8, 9, 10, 12, 13, 14, 15 and 16 of the Law 2392/1996 (Government Gazette No 60, Issue A): “Access of the General Secretariat of the National Statistical Service of Greece to administrative sources and administrative files, Statistical Confidentiality Committee, settlement of matters concerning the conduct of censuses and statistical works, as well as of matters of the General Secretariat of the National Statistical Service of Greece”.

Data collection

The ECHP (European Community Household Panel) survey was operated under a gentleman's agreement. Its successor, the EU-SILC (Statistics on Income and Living Conditions) instrument, operates under a framework regulation of the Council and the Parliament and a series of Commission implementing regulations. During the transition period, data was also collected under a gentleman's agreement from national sources.

The EU-SILC project was launched in 2003, on the basis of a 'gentlemen's agreement' in six MS (Belgium, Denmark, Greece, Ireland, Luxembourg, and Austria) as well as in Norway. EU-SILC (Statistics on Income and Living Conditions), now operates under a framework Regulation of the Council and the Parliament (Regulation (EC) No 1177/2003) and a series of Commission implementing Regulations.

Indicators

At the Laeken European Council in December 2001, Heads of State and Government endorsed a first set of common statistical indicators of social exclusion and poverty that are subject to a continuing process of refinement by the Indicators Sub-group (ISG) of the Social Protection Committee (SPC). These indicators

are an essential element in the Open Method of Coordination (OMC) to monitor the progress of Member States in the fight against poverty and social exclusion. The European Council adopted in March 2006 a new framework for the social protection and social inclusion process. While EU countries have different policies in the area of social inclusion, pensions, health and long-term care, they have agreed common objectives in this area, as well as common indicators so that they can compare best practices and measure progress. A set of 14 headline indicators is complemented by specific indicators relating to three main areas: poverty and social exclusion, pensions, and health and long-term care.

The Europe 2020 strategy foresees three key priorities for sustainable growth and jobs: knowledge and innovation, green growth - a competitive and sustainable economy, and an inclusive high-employment society. This latter point will be focused on raising employment rates, combating the risks of poverty, promoting active ageing, raising skills.

For more information on policy developments, refer to the European Commission's website:

[Employment, Social Affairs & Inclusion](#)

6.2 Data sharing

Not applicable

7. Confidentiality

[Top](#)

7.1 Confidentiality - policy

- ELSTAT protects and does not disseminate data it has obtained or it has access to, which enable the direct or indirect identification of the statistical units that have provided them by the disclosure of individual information directly received for statistical purposes or indirectly supplied from administrative or other sources. ELSTAT takes all appropriate preventive measures so as to render impossible the identification of individual statistical units by technical or other means that might reasonably be used by a third party. Statistical data that could potentially enable the identification of the statistical unit are disseminated by ELSTAT if and only if:

a) these data have been treated, as it is specifically set out in the [Regulation on the Statistical Obligations of the agencies of the Hellenic Statistical System \(Government Gazette 2469 B, 4.11.2011\)](#) (ELSS), in such a way that their dissemination does not prejudice statistical confidentiality or

b) the statistical unit has given its consent, without any reservations, for the disclosure of data.

7.2 Confidentiality - data treatment

- The confidential data that are transmitted by ELSS agencies to ELSTAT are used exclusively for statistical purposes and the only persons who have the right to have access to these data are the personnel engaged in this task and appointed by an act of the President of ELSTAT.
- Issues referring to the observance of statistical confidentiality are examined by the Statistical Confidentiality Committee (SCC) operating in ELSTAT. The responsibilities of this Committee are to recommend on:
 - the level of detail at which statistical data can be disseminated, so as the identification, either directly or indirectly, of the surveyed statistical unit is not possible;
 - the anonymization criteria for the microdata provided to users;
 - the granting to researchers access to confidential data for scientific purposes.

10.3 On-line database

10.3.1 Data tables - consultations

10.4 Micro-data access

The EU-SILC microdata are available to users upon request to the appropriate Department of Statistics Information Providers (e-mail: datadissem@statistics.gr) and with the assent of the Committee on Statistical Confidentiality.

10.5 Other
<u>10.5.1 Metadata – consultations</u>
10.6 Documentation on methodology
All relevant information is on ELSTAT’s website, in the following address: https://www.statistics.gr/en/statistics/-/publication/SFA10/2018
<u>10.6.1 Metadata completeness – rate</u>
10.7 Quality documentation
Regulation CE 28/2004 on the content of intermediate and final quality reports published in the OJ on 5 January 2004 <ul style="list-style-type: none"> • Comparative EU Quality Reports are available on the following web address: Income and living conditions,eu and national quality reports • National Quality Reports are available on the following web address: Income and living conditions,national quality reports

11. Quality management	Top
11.1 Quality assurance	
The quality of the survey is ensured by the existence of a methodological handbook issued by Eurostat, as well as by the use of a common questionnaire – template in order to improve comparability of results in all member states, and with the application of Code of Good Practice for European Statistics. More specifically, the EU-SILC survey is based on a framework Regulation (1177/2003) that defines the scope, definitions, time reference, characteristics of the data, data required, sampling, sample sizes, transmission of data, publication, access for scientific purposes, financing, reports and studies. In addition, Eurostat and Member States have developed the technical aspects of the instrument, in particular one Regulation on 'Quality Reports' (28/2004). Quality Assurance Framework of the European Statistical System	
11.2 Quality assessment	
Assessment of the quality is carried out by the ELSTAT and Eurostat. The sample size is such, as to ensure high accuracy results. The sample size represents the reference research population and all necessary measures are taken in order to accomplish the appropriate checks and minimize measurement errors in data collection. The data are accompanied by quality reports analyzing the accuracy, consistency and comparability of data. After the checks in order to detect errors, which are being corrected and the estimation of sampling errors, the obtained results are considered to be of high quality.	

12. Relevance	Top
12.1 User needs	

EU-SILC the main user is Eurostat: Other users are:

- Institutional users like other Commission services, other European institutions (such as the ECB), national administrations (mainly those in charge of the monitoring of social protection and social inclusion, or other international organisations;
- Statistical users in Eurostat or in Member States National Statistical Institutes to feed sectoral or transversal publications such as the Annual Progress Report on the Lisbon Strategy (structural indicators), the Sustainable Development Strategy monitoring report, the Eurostat yearbook and various pocketbooks, among other reports;
- Researchers having access to microdata; and
- End users - including the media - interested in living conditions and social cohesion in the EU.

12.2 User satisfaction

Department of Statistical Information Transmission conducts a survey on users' satisfaction.

[User satisfaction survey](#)

13.3. Completeness

The completeness of data and breakdowns are considered as very satisfactory based on the needs set from Eurostat's Regulations.

13. Accuracy and reliability

[Top](#)

13.1 Overall accuracy

In terms of precision requirements, the EU-SILC framework regulation as well the Commission Regulation on sampling and tracing rules refer respectively, to the effective sample size to be achieved and to representativeness of the sample. The effective sample size combines sample size and sampling design effect which depends on sampling design, population structure and non-response rate.

13.2 Sampling error

EU-SILC is a complex survey involving different sampling design in different countries. In order to harmonize and make sampling errors comparable among countries, Eurostat (with the substantial methodological support of Net-SILC2) has chosen to apply the "linearization" technique coupled with the "ultimate cluster" approach for variance estimation. Linearization is a technique based on the use of linear approximation to reduce non-linear statistics to a linear form, justified by asymptotic properties of the estimator. This technique can encompass a wide variety of indicators, including EU-SILC indicators. The "ultimate cluster" approach is a simplification consisting in calculating the variance taking into account only variation among Primary Sampling Unit (PSU) totals. This method requires first stage sampling fractions to be small which the case is nearly always. This method allows a great flexibility and simplifies the calculations of variances. It can also be generalized to calculate variance of the differences of one year to another .

The main hypothesis on which the calculations are based is that the "at risk of poverty" threshold is fixed. According to the characteristics and availability of data for different countries we have used different variables to specify strata and cluster information. In particular, countries have been split into four groups:

1)BE, BG, CZ, IE, EL, ES, FR, IT, LV, HU, NL, PL, PT, RO, SI, UK and HR whose sampling design could be assimilated to a two stage stratified type we used DB050 (primary strata) for strata specification and DB060 (Primary Sampling Unit) for cluster specification;

2)DE, EE, CY, LT, LU, AT, SK, FI, CH whose sampling design could be assimilated to a one stage stratified

type we used DB050 for strata specification and DB030 (household ID) for cluster specification;
3)DK, MT, SE, IS, NO, whose sampling design could be assimilated to a simple random sampling, we used DB030 for cluster specification and no strata

13.3 Non-sampling error

13.3.1 Coverage error

Coverage errors are caused by the imperfections of a sampling frame for the target population of the survey.

- Coverage errors include over-coverage, under-coverage and misclassification:
- Over-coverage: relates either to wrongly classified units that are in fact out of scope, or to units that do not exist in practice
- Under-coverage: refers to units not included in the sampling frame
- Misclassification: refers to incorrect classification of units that belong to the target population

In Eu Silc 2018 survey there were $27/29,734 = 0.09\%$ (27 dwellings were empty or secondary or for professional use etc)

A systematic source of coverage problems is the time lag between the reference date for the selection of the sample and the fieldwork period, which should be made the shortest.

13.3.1.1 Over-coverage – rate

13.3.1.2 Common units – proportion

13.3.2 Measurement error

Measurement errors can occur from the questionnaire (design, content and wording), the interviewers and their training, the respondents, the routing, and the skills testing before starting the fieldwork.

13.3.3 Processing error

Non-response errors are errors due to an unsuccessful attempt to obtain the desired information from an eligible unit. Two main types of non-response errors are considered.

Unit non response: which refers to the absence of all information of a whole unit (households and/or persons) selected for survey.

Item non-response: which refers to the absence part of information of the unit (households and/or persons) selected for survey

In Eu Silc 2018 survey the non-response percentage was 16.70% (4,967 households refused to co-operate, were temporarily away or were unable to respond etc)

13.3.4 Model assumption error

14. Timeliness and punctuality	Top
14.1 Timeliness	
EU-SILC cross-sectional data are available in the form of tables 15 months after the end of the data collection period.	
14.2 Punctuality	
The data are produced and disseminated on a predetermined date.	

15. Coherence and comparability	Top
15.1 Comparability - geographical	
Since common variable definitions and data production methods have been implemented not only in all geographical regions of the country but also among all EU countries, no geographical comparability problems have been caused.	
<u>15.1.1 Assymetry for mirror flows statistics – coefficient</u>	
15.2 Comparability over time	
15.3 Coherence cross-domain	
<u>15.3.1 Coherence – sub annual and annual statistics</u>	
Coherence between two or more statistical results refers to the degree of using the same definitions and methods in order to produce the statistics. The common variables of the survey with those of other surveys (LFS, HBS) do not present statistically significant differences.	
<u>15.3.2 Coherence – National Accounts</u>	
15.4 Coherence - internal	

16. Cost and burden	Top
EU-SILC was designed to keep respondent burden controlled so to avoid high non-response rate and to ensure good quality of the information collected. The target is to limit the total length of interviewing household in average below 56 minutes.	

17. Data revision	Top
17.1 Revision policy	

The revision policy may relate to the survey data and the survey itself, i.e. the questionnaire, the sample, etc., and takes into account users' needs in additional statistical information

[Revision policy](#)

17.2 Revision practice

After identifying the users' needs (e.g. Eurostat's) questionnaires are, whenever needed, redesigned with care not to danger comparability over time and at European level. Review of data is being made after the application of checks by ELSTAT and by Eurostat, and after correcting any inconsistencies that may exist in the data, both cross-sectionally and longitudinally.

18. Statistical processing

[Top](#)

18.1 Source data

The survey is a sampling one. The two stage stratified sampling method is adopted for the survey. The primary research unit is the surface (one or more unified blocks or settlement) and secondary research unit is the household. The sample for the year 2018 consists of about 29,734 households (0.72% of the estimated total number of households in the country).

18.2 Frequency of data collection

Annually

18.3 Data collection

The method of data collection is mainly the Paper-Assisted Personal Interview (PAPI). Other modes are used in much lower percentages. However, ELSTAT understands the need for higher use of other modes of data collection.

18.4 Data validation

Data validation is being done by conducting qualitative and quantitative tests based on:

- Longitudinal checks on raw data (with data of previous years)
- Comparisons key variables with variables / data of other statistical sources
- Calculation of sampling errors, also used as a criterion for the final validation of data

18.5 Data compilation

Estimates at aggregate level (e.g. EU-28) are calculated as the population-weighted arithmetic average of individual national figures.

18.5.1 Imputation – rate

18.6 Adjustment

18.6.1 Seasonal adjustment

19. Comment
