I. UNEMPLOYMENT CHARACTERISTICS

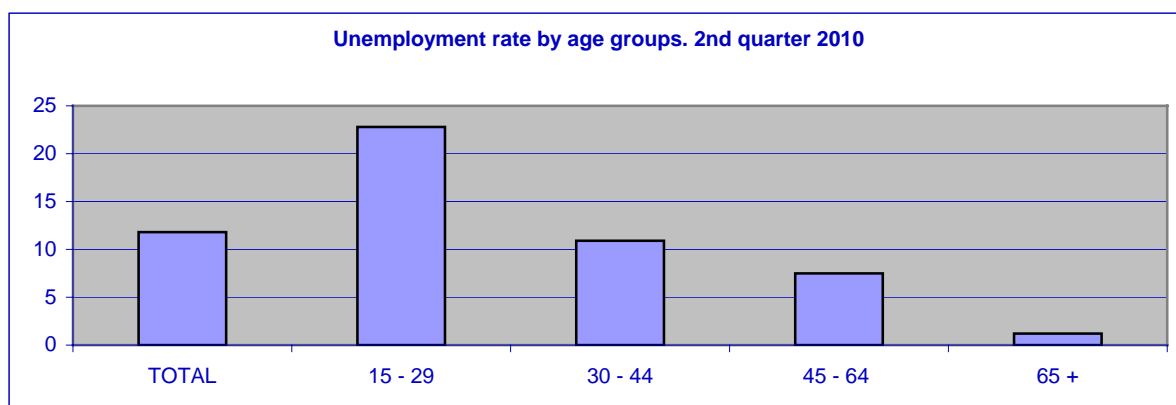

The unemployment rate for females (15.3%) is considerably higher than the unemployment rate for males (9.4%).

By observing the unemployment rate for different age groups, we notice that the highest unemployment rate is recorded among young people in the age group of 15-29 years (22.8%). For young females, the unemployment rate is 27.5% (Table 1, chart 1).

The number of the unemployed persons is estimated at 594,032. Of these, 86.9% are looking for a full time job as employees. More specifically, 52.4% of those looking for job as employees are looking exclusively for a full time job, while 37.6% are looking for full time job, but, if needed, would accept to work part time.

A significant part of the unemployed persons (8.2%) did not accept a job offer, during the 2nd quarter of 2009, because of various reasons. The main reasons reported were:

- a) the location of the job was not suitable (24.7%),
- b) the wage was not satisfactory (19.4%),
- c) the working hours were not convenient (16.8%).

The percentage of the “new” unemployed, that is the percentage of persons who entered for the first time labour market, is 23.8%. We should note that the percentage of the “long term” unemployed, that is the percentage of persons that have been looking for a job for more than 1 year (irrespectively of being “new” or “old” unemployed), is 47.7%.

The unemployment rate is higher for persons of foreign nationality (14.3%) compared with those of Greek nationality (11.4%). On the contrary, the percentage of the economically active persons with foreign nationality is much higher than the corresponding percentage for persons of Greek nationality (73.8% compared to 52.5%).

The geographical areas (NUTS II regions) with the highest unemployment rate are West Macedonia (14.6%) and East Macedonia and Thrace (13.9%). The lowest unemployment rates are observed in North Aegean (8.5%), and Peloponnese (9.9%) (Table 3).

II. EMPLOYMENT CHARACTERISTICS

During the 2nd quarter of 2010, 98,251 persons who were unemployed one year ago found a job. During the same period, 67,549 persons who were inactive one year ago, got into employment. On the contrary, 148,530 persons who were working one year ago, during the 2nd quarter of 2010 are unemployed and 79,947 persons, who were working, are now inactive. In addition, 90,232 persons who were inactive one year ago, during the 2nd quarter of 2010 entered labour market and are searching for a job.

If we examine changes in employment by different sector of economic activity, we see that compared to the 2nd quarter of 2009 there was an increase in employment in the tertiary sector (0.7%). On the contrary, during the same period, there was a decrease in employment in the primary (1.9%) and the secondary sector (0.9%) (chart 2).

Chart 2

The percentage of part time employment is low and amounts to 6.4% of the total of the employed. The percentage of part timers who choose to work part time because they cannot find a full time job is 51.3%, while 7.0% choose a part time job because they are looking after children or incapacitated adults. (Table 6).

The percentage of employees is estimated at 64.5% of the total of the employed persons and is by far lower than the mean percentage of employees in the European Union which is 80% (Chart 3, Table 6).

Chart 3

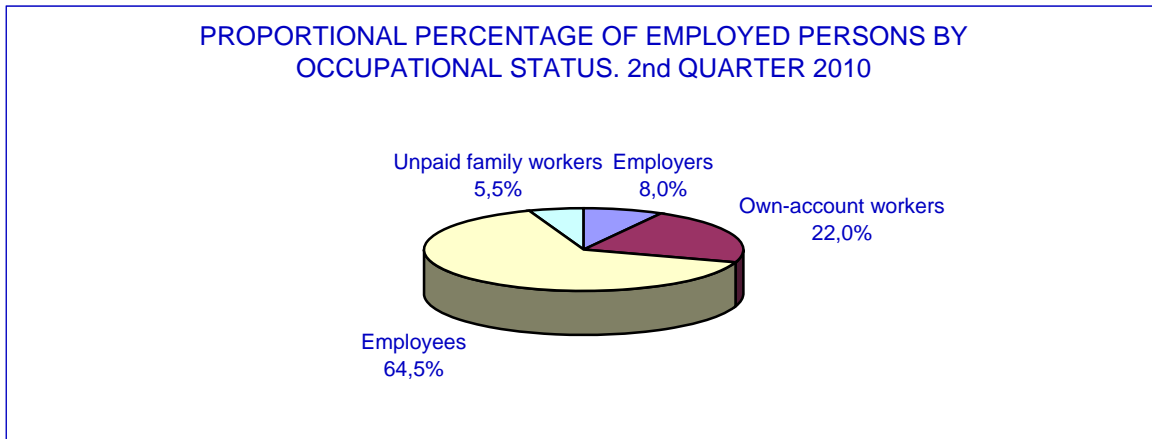

Table 4 illustrates the number of the employed by branch of economic activity for the 2nd quarter of 2010 compared to the 1st quarter of 2010 and the 2nd quarter of 2009, while Table 5 gives the percentage allocation of the employed for the different branches of economic activity in the 13 regions of Greece (NUTS II). Finally, Table 6 illustrates the total number of the employed, as well as the percentage of women, employees, part time workers, and persons with contracts of limited duration, by occupation, for the 2nd quarter of 2010.

EXPLANATORY NOTES

Labour Force Survey Labour Force Survey produces estimates since 1981 (second quarter of the year). From 1998 onwards it is a continuous quarterly survey. The main statistical objectives of the Labour Force Survey is to divide the population of working age (15 years and over) into three mutually exclusive and exhaustive groups - persons in employment, unemployed persons and inactive persons. In addition, the Labour Force Survey collects information on demographic characteristics, on main job characteristics, on the existence and characteristics of a second job, on educational attainment, on participation in education, on previous working experience and on search of job.

Legislation The current survey is completely harmonized with European legislation. The principal legal act is the Council Regulation (EC) No. 577/98 that stipulates the provisions on design, survey characteristics and decision-making processes. The survey framework was modified in successive Commission regulations. (Regulation (EC) No 1372/2007 , Regulation (EC) No 2257/2003 , Regulation (EC) No 1991/2002).

Reference Period The sample of Labour Force Survey is equally allocated to the 4 (or 5) weeks of the month. Every selected household is assigned to a specific week, the reference week, running from Monday to Sunday.

- For employment the reference period is the reference week.
- For employment seeking the reference period is the reference week and the previous 3 weeks.

Coverage For the monthly estimates, a sub-sample of the quarterly Labour Force survey's sample was used.

Definitions **Employed** are persons aged 15 years or older, who during the reference week worked, even for just one hour, for pay or profit or they were working in the family business, or they were not at work but had a job or business from which they were temporarily absent.

Unemployed are persons aged 15-74 who were without work during the reference week (they were not classified as employed), were currently available for work and were either actively seeking work in the past four weeks or had already found a job to start within the next three months.

Inactive are those persons who are neither classified as employed nor as unemployed.

Economically active population (labour force) are persons either employed or unemployed.

Unemployment Rate is the ratio of unemployed divided by total labour force.

Methodology Labour Force Survey' s estimates are produced by a suitable unbiased estimator which takes in to account a) the probability of selection of every sampled household, b) the response rate in every primary sampling unit, c) the estimated population for January 2010, allocated by NUTS II areas, gender and age group).
