

## PRESS RELEASE

### HARMONIZED INDEX OF CONSUMER PRICES: February 2014 (2005=100.0)

The Harmonized Index of Consumer Prices (HICP) in February 2014 compared with February 2013 decreased by 0.9%. In February 2013, the annual rate of change of the HICP was 0.1% (Tables 1,2).

The HICP in February 2014 compared with January 2014 decreased by 1.1%. In February 2013, the monthly rate of change of the HICP was -1.6% (Table 2).

In the twelve-month period from March 2013 to February 2014 compared with the period from March 2012 to February 2013 the annual average rate of change of the HICP was -1.1%. The previous year, in the corresponding twelve - month period, the annual average rate of change of the HICP was 0.7% (Tables 2,3).

Note : MUICP February 2014, provisional data.

# DIAGRAM

## METHODOLOGICAL NOTES

<b>Generally</b>	The Harmonized Index of Consumer Prices (HICP), together with the national CPI have being compiled in Greece by the Hellenic Statistical Authority (ELSTAT), since 1996.
<b>Purpose and use of the HICPs</b>	<p>The Harmonized Indices of Consumer Prices (HICPs) are compiled by the Member States of E.U. in accordance with EC Regulations, in order to provide comparable data for the international inflation comparisons and, in particular, for the assessment of the convergence criterion, of price stability, in the frame of the European Monetary Union (EMU) requirements.</p> <p>The HICPs are the basis for compiling the European Index of Consumer Prices (EICP) and the Monetary Union Index of Consumer Prices (MUICP), which provide the official measures of inflation in the EU27 and the Euro-zone (17 Member States), respectively.</p> <p>It should be noted that the HICP is not a cost of living index and it is not applied by a country for domestic use such as indexation or wage bargaining also it is not intended to replace the national Consumer Price Index.</p>
<b>Legal frame</b>	The Harmonized Indices of Consumer Prices are compiled by the Member States in the frame of the basic Council Regulation (EC) No 2494/95 "for the establishment of Harmonized Indices of Consumer Prices" and of other 19 Council and Commission EC Regulations, which lay down particular implementation measures governing the compilation of HICPs.
<b>Reference period</b>	Month
<b>Base year</b>	2005=100.0, according to (EC) Council Regulation No 1708/05.
<b>Characteristics of the HICPs</b>	<p>The characteristic of the HICPs is that they must be compiled according to several technical measures, as these are defined in the above EC Regulations.</p> <p>The main technical measures are the use of a common classification of the items (COICOP/HICP), the selection of the computation formula for the individual indices, the geographical and population coverage of the whole of the country, the item coverage and compilation of specific sub-indices, the minimum standards for price collection and sampling, the adjustments due to quality differences of items, the common treatment of tariffs of Public Utility Services, the common base year (2005=100.0) and retrospective calculations of the indices data from January 1996 onwards.</p>
<b>Geographical and population coverage of the HICPs</b>	The geographical and population coverage of the HICPs is defined by the Council Regulation (EC) No 1688/98, which specifies that the HICP of each Member State should cover all final monetary consumption expenditure which takes place in the economic territory of the Member State.
<b>Classification of items</b>	The classification of items (goods and services) that are included in the HICP is based on the international classification COICOP (Classification of Individual consumption by Purpose) and, in particular, as this has been adapted to the needs of the HICPs, thus creating the COICOP/HICP classification.
<b>Weights of items</b>	<p>The weights of the items of the HICPs are derived on the basis of the consumption expenditure, which takes place in the economic territory of each Member State independently of the consumer category (private households, individuals living in institutions, foreign visitors).</p> <p>Consequently, the expenditures used for the calculation of the weights of the items entered into the computation of the HICP include the expenditures of private households, the expenditures of foreign visitors and the expenditures of individuals living in collective households, while the expenditures of residents whilst in a foreign country are excluded.</p> <p>The sources of the expenditure data used for the calculation of the weights of items of HICP are the National Accounts and the Household Budget Survey (HBS) as provided from Regulation 1114/2010.</p> <p>The weights of the items are updated every January by using the prices of the previous December.</p>
<b>Collected prices</b>	The prices used for the computation of the HICPs are the prices actually faced by households to purchase goods and services in their monetary transactions.

**Comparison between the national CPI and the Greek HICP**

There are similarities and differences between the national CPI and the Greek HICP.

The main similarities between the two indices are the following:

- Same geographic coverage, given that both indices refer to the whole country.
- Same price collection cities.
- Same item coverage.
- Use of the same classification of items (COICOP/HICP).
- Same outlets for the price collection.
- Same frequency of price collection
- Same price data.
- Same method of the time series calculation (chain linking)
- Use of the same formula for the computation of the individual indices for the price collection cities (geometric mean).
- Same treatment of the seasonality of items and of reduced and missing prices.
- Same dates of release of the indices.
- Annual updating of the weights and price updating of them to previous December prices.

The main differences between the two indices are the following:

- Different base year of the HICP(2005=100.0) and CPI (2009=100.0).
- Different population coverage, given that the HICP covers all consumption expenditures which take place on the economic territory of Greece, independently of the consumer category, while the national CPI covers the consumption expenditures, which take place in the economic territory of Greece and abroad, of the private households only.
- Different weights of items because of the use of different data sources for the calculation of the weights, HBS data for the CPI and National accounts data for the HICP.

**Publication of data**

The HICP data are released each month in the anticipated press release, on dates pre-defined from the previous year. These data with base year 2005=100.0 have being published since February 2006 with first reference month January 2006. The time series of the index with base year 2005=100.0 starts in January 1996.

**References**

More information about the methodology concerning the compilation and calculation of the index and for the time series is available on the ELSTAT website ([www.statistics.gr](http://www.statistics.gr)).

# ANNEX

## Harmonised index of consumer prices at constant tax rates

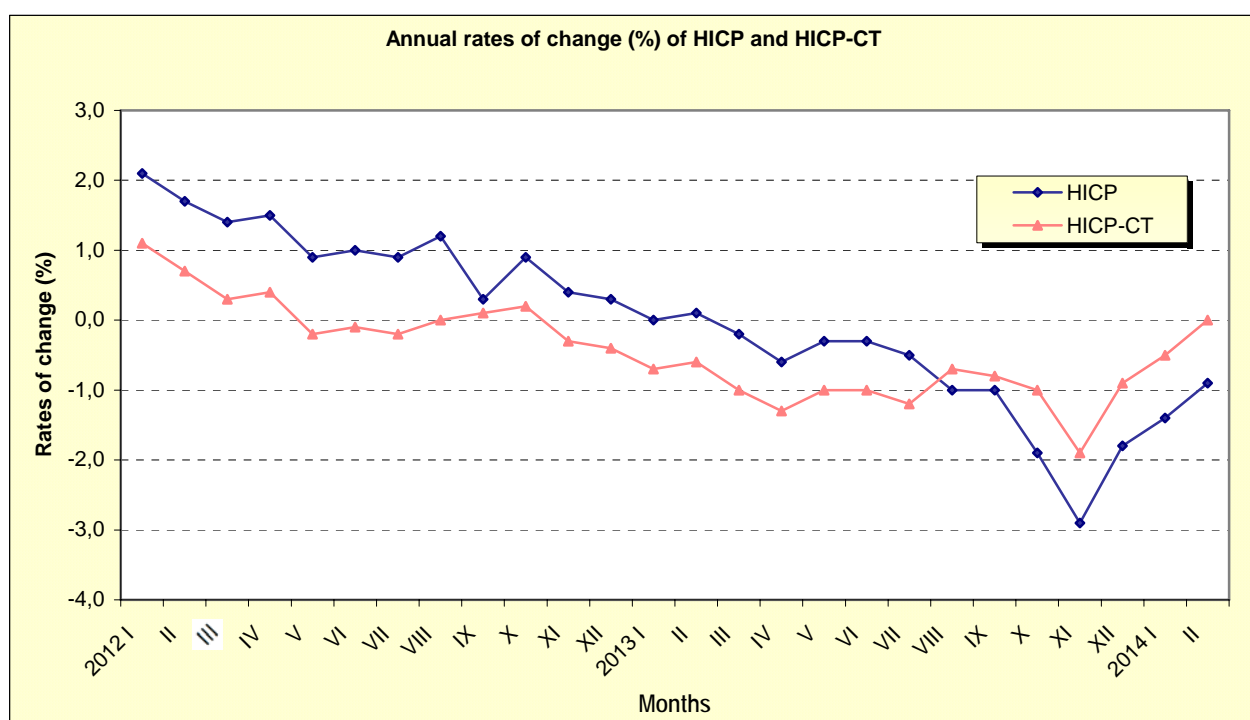

### February 2014

The Harmonized Index of consumer prices at constant tax rates (HICP-CT) in February 2014 compared with February 2013 remained unchanged. In February 2013, the annual rate of change of the HICP-CT was -0.6%.

The HICP-CT in February 2014 compared with January 2014, decreased by 1.1%. In February 2013, the monthly rate of change of the HICP-CT was -1.6%.

### Monthly evolution and rates of change of HICP-CT (2005=100.0)

Months	Indices			Monthly rate of change (%)			Annual rate of change (%)		Annual average rate of change (%)

December	114.77	113.77		-0.3	0.8		-0.9		-1.0	
Annual average index	114.66	113.52							-1.0	

## METHODOLOGICAL NOTES

<b>General</b>	The Hellenic Statistical Authority (ELSTAT) presents in this annex of the press release for the Harmonized Index of Consumer Prices (HICP), the Harmonized Index of Consumer Prices at constant tax rates (HICP-CT).
<b>Definition</b>	The HICP-CT is an index that measures changes in consumer prices without impact of changes in rates of taxes on products or services during the same period of time. The HICP-CT does not provide an exact measure of the impact of changes in tax rates, rather an indication for the upper limit of the impact.
<b>Computation</b>	The HICP-CT follows the same computation principles as the HICP, the same goods and services as those covered by the HICP and the same weighting which is applied for the HICP but it is based on prices at constant tax rates of December of the previous year.
<b>Tax coverage</b>	<p>The taxes considered in the HICP-CT are those directly linked to final consumption.</p> <p>These taxes are:</p> <ul style="list-style-type: none"><li>• VAT</li><li>• excise duties on alcoholic beverages, tobacco and energy items (petrol, heating oil, natural gas, electricity usage), mobile telephony, vehicles and motor cycles.</li><li>• taxes like registration fee on some specific items such as cars.</li></ul>
<b>Differences between HICP and HICP-CT</b>	The difference between HICP and HICP-CT growth rates points to the theoretical impact of tax changes on overall HICP inflation, assuming an instantaneous pass-through of tax rate changes on the price paid by the consumer. In principle, all taxes taken into account in the HICP-CT are kept constant.
<b>Legal frame</b>	The Harmonized Index of Consumer Prices at constant tax rates is compiled by the Member States in the frame of the Commission Regulation (EU) No 119/2013 “as regards establishing harmonized indices of consumer prices at constant tax rates”. According to this Regulation the relative data has to be transmitted to Eurostat in a regular monthly base, in parallel with HICP data
<b>Reference period</b>	Monthly
<b>Base year</b>	2005=100.0
<b>Publication of data</b>	The HICP-CT is a monthly index and their relative data series is foreseen to be included in the annex of HICP press release by monthly periodicity. The release dates of the index are the same predefined release dates of the HICP.
