

CONSUMER PRICE INDEX: April 2023, annual inflation 3.0%

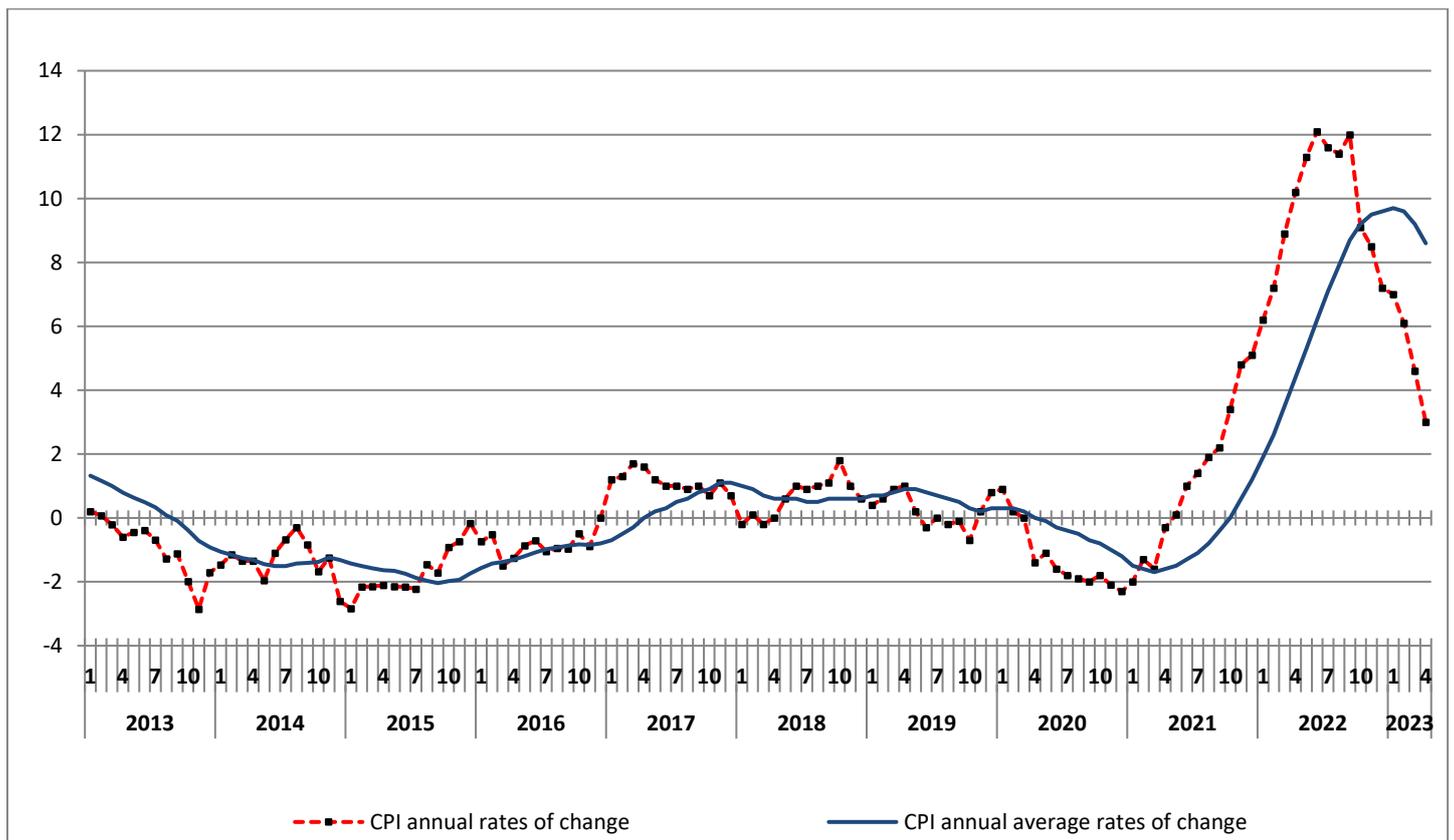

The evolution of the Consumer Price Index (CPI) of April 2023 (reference year 2020=100.0) is depicted as follows:

The CPI in April 2023 compared with April 2022, increased by 3.0%. In April 2022, the annual rate of change of the CPI was 10.2% (Table 2).

The CPI in April 2023 compared with March 2023, increased by 0.6%. In April 2022, the monthly rate of change of the CPI was 2.1% (Table 1).

The average CPI for the twelve - month period from May 2022 to April 2023, compared with the corresponding index for the period May 2021 to April 2022 increased by 8.6%. The annual rate of change of the average CPI between the twelve - month period May 2021 to April 2022 in comparison to the period May 2020 to April 2021 was 4.4% (Table 3).

Analysis of changes of the CPI: April 2023

I. Monthly rates of change: April 2023 compared with March 2023 (Tables 1, 4)

The 0.6% increase of the Overall CPI in April 2023, compared with the corresponding index in March 2023 is, mainly, due to the changes in the groups of goods and services as follows:

1. An increase of:

- 5.3% in the group Clothing and footwear, due to the recovery of part of prices up to normal levels as before the winter sales period.
- 0.5% in the group Housing, due to the increase, mainly, in the prices of: *heating oil, solid fuels*. This increase was partly offset by the decrease, mainly, in the prices of: *electricity, natural gas*.
- 0.4% in the group Household equipment, due to the recovery of prices up to normal levels as before the winter sales period. This increase was partly offset by the decrease, mainly, in the prices of *non-durable household articles*.
- 0.9% in the group Health, due to the increase, mainly, in the prices of *medical-dental and paramedical services*.
- 1.3% in the group Recreation and culture, due to the increase, mainly, in the prices of *major durables for recreation and culture*.
- 1.9% in the group Hotel-Cafés-Restaurants, due to the increase, mainly, in the prices of: *restaurants-confectioneries-cafes-buffets, hotels-motels-inns*.
- 0.2% in the group Miscellaneous goods and services, due to the increase, mainly, in the prices of *hairdressing salons and personal grooming establishments, motor vehicle insurance*. This increase was partly offset by the decrease, mainly, in the prices of *other appliances and articles for personal care*.

2. A decrease of:

- 0.1% in the group Food and non-alcoholic beverages, due to the decrease, mainly, in the prices of: *dried salted or smoked meat, fresh fish, milk cheese and eggs, fresh vegetables*. This decrease was partly offset by the increase, mainly, in the prices of: *bread and cereals, beef, olive oil, sugar-chocolates-sweets-ice creams*.
- 0.3% in the group Alcoholic beverages and tobacco, due to the decrease, mainly, in the prices of *alcoholic beverages (not served)*.
- 0.1% in the group Transport, due to the decrease, mainly, in the prices of: *diesel, tickets for passenger transport by air*. This decrease was partly offset by the increase, mainly, in the prices of *petrol*.

II. Annual rates of change: April 2023 compared with April 2022 (Tables 2, 5)

The 3.0% increase of the Overall CPI in April 2023, compared with the corresponding index in April 2022 is, mainly, due to the changes in the groups of goods and services as follows:

1. An increase of:

- 11.4% in the group Food and non-alcoholic beverages due to the increase, mainly, in the prices of: *bread and cereals, meat, fish, milk-cheese and eggs, oils and fats, vegetables, sugar-chocolates-sweets-ice creams, food n.e.c., coffee-cocoa-tea, mineral water-refreshments-fruit juices.*
- 4.0% in the group Alcoholic beverages and tobacco, due to the increase, mainly, in the prices of *alcoholic beverages (not served).*
- 5.6% in the group Clothing and footwear, due to the increase in the prices of clothing and footwear.
- 10.9% in the group Household equipment, due to the increase, mainly, in the prices of: *furniture and furnishings, household appliances and repair, glassware-tableware and utensils of domestic use, non-durable household articles, domestic services.*
- 6.5% in the group Health, due to the increase, mainly, in the prices of: *pharmaceutical products, medical products, medical-dental and paramedical services, hospital care.*
- 1.4% in the group Transport, due to the increase, mainly, in the prices of: *new motor cars, second hand motor cars, motor cycles, spare parts and accessories for motor cars, maintenance and repair of motor cars-motor cycles, passenger transport by taxi, tickets for passenger transport by air, tickets for passenger transport by sea.* This increase was partly offset by the decrease, mainly, in the prices of *fuels and lubricants.*
- 3.7% in the group Recreation and culture, due to the increase, mainly, in the prices of: *major durables for recreation and culture, small recreational items-flowers-pets, cinemas-theatres, stationary and drawing materials, package holidays.*
- 2.2% in the group Education, due to the increase, mainly, in the prices of: *fees of primary education, fees of secondary education.*
- 8.5% in the group Hotel-Cafés-Restaurants, due to the increase, mainly, in the prices of: *restaurants-confectioneries-cafes-buffets, hotels-motels-inns.*
- 6.4% in the group Miscellaneous goods and services, due to the increase, mainly, in the prices of: *hairdressing salons and personal grooming establishments, other appliances and articles for personal care, private insurance connected with health, motor vehicle insurance.*

2. A decrease of:

- 13.4% in the group Housing, due to the decrease, mainly, in the prices of: *electricity, natural gas, heating oil.* This decrease was partly offset by the increase, mainly, in the prices of: *rentals for dwellings, services for the repair and maintenance of the dwelling, co-proprietor charges, liquefied oil, solid fuels.*
- 1.8% in the group Communication, due to the decrease, mainly, in the prices of *telephone services.*

METHODOLOGICAL NOTES

Generally	The Consumer Price Index (CPI) is compiled by the Hellenic Statistical Authority (ELSTAT) since 1959. Until the year 2000, the CPI referred to the urban areas of the Country, while from 2001 onwards it refers to the whole Country covering urban, semi-urban and rural areas.
Purpose of the index	The purpose of the CPI is to measure the general level of prices of goods and services purchased by the average Greek household.
Legal basis	Law 3832/2010 .
Reference period	Month.
Base	December of the previous year.
Reference year	2020=100.0.
Chain linking Index	The CPI index follows the chain linking method, introducing new weights annually and having as a base the December of the previous year. The weights are estimated on the basis of the most recent available data of the Household Budget Survey (HBS), extrapolated to the prices of December. The CPI, adjusted on an annual basis to the most recent consumption expenditure pattern of the private households of the Country, ensures the representativeness of goods and services, which compose the "basket" of purchases of the average household.
Geographical and population coverage of the CPI	The CPI refers to the whole Country and covers the resident households of the territory excluding collective households (hospitals, homes for the elderly, boarding houses, prisons, etc.) and non-resident households (tourists) in the Country.
Classification of items	The classification of the CPI items (goods and services) is based on the international classification COICOP (Classification of Individual Consumption by Purpose) as this has been adapted to the needs of the HICPs of the EU Member States with the COICOP5/HICP classification.
Weights of items	The weights of CPI items are updated every year, on the basis of the most recent available data of HBS. The weights are calculated as the share (%) of the expenditures for each group, subgroup and item (good or service) to the total household expenditure of the average household.
Price collection Cities	The CPI prices are collected in 27 cities with representative markets for the coverage of the 13 Regions of the Country. The selection criteria of the price collection cities are the size and the particularities of their markets, the possibility of continuous price collection, the comparability of the index and the cost of price collection.
Population weights	The calculation of the population weights by regions is based on the population data of the 2011 General Population Census and the expenditure data of the latest available HBS by regions.
Selection of items	The composition of the "household basket" i.e. the selection of goods and services which are included in the calculation of CPI is updated annually, using the results of the latest available HBS, other market research, etc. The chain linking methodology allows the change of items of the household basket on an annual basis, in order to ensure the representativeness of the items involved in the calculation of groups and subgroups of CPI.
Price collection-Outlets	The prices collection outlets are retail stores, enterprises providing services, street markets etc. which are considered representative of the branches of shops, where the households make their purchases in the 27 selected cities. The methodology allows the renewal of price collection sources, annually, in order to maintain their representativeness in the calculation of CPI. Prices are collected by employees of ELSTAT as well as by external price collectors, hired on a temporary basis. They pay a visit to the selected outlets within a specific time period of a month (monthly prices) or on a specific day of the week (weekly prices). The collected prices correspond to the prices actually faced by the consumer.
Specification-Substitution of items	All the collected items are defined by the specification, that is the particular characteristics which determine the quality, the trade show and the identity, in general, of good products (such as brand, weight, package etc), in order to avoid any price variations attributable to differences in the specification. Once a specified item (good or service) is no longer available in the market or has ceased to be important, as regards consumption, it is substituted by a newly specified item, which has taken its place in the market.

Calculation of the Consumer Price Index

The Consumer Price Index is a Laspeyres-type index and it is calculated based on December of the previous year.

Implementation of formula in five-digit level of COICOP5

Specifically, if the five-digit item h includes q price collected items, then its index in month t of year T, $R_h^{t,T}$, is given by the following formula:

$$R_h^{t,T} = R_h^{12,T-1} \left[\frac{\sum_{i=1}^q w_i^T R_i^{t,T} / R_i^{12,T-1}}{\sum_{i=1}^q w_i^T} \right],$$

where:

$R_h^{12,T-1}$ = the index of the five-digit item h, in December of year T-1.

w_i^T = the weight of the price collected item I, in year T.

$R_i^{t,T}$ = the index of the price collected item I, in month t of year T.

$R_i^{12,T-1}$ = the index of the price collected item I, in December of year T-1.

A similar methodology is followed for the calculation of indices in the upper levels (two-digit, three-digit and four-digit) of COICOP5 and the calculation of the overall CPI as well.

Publication of data The published CPI time series (reference year 2020=100.0), covers the period from January 1959 onwards. The CPI data are released each month as scheduled, in accordance with the Releases Calendar of ELSTAT, with the [Release and the tables](#).

References Further information concerning the methodology and the compilation of the CPI is available in the [Methodological Publication CPI \(2009=100.0\)](#) and the [Single Integrated Metadata Structure \(SIMS\)](#).
