

## SUMMARY QUALITY REPORT FOR USERS FARM STRUCTURE SURVEY, YEAR 2013

**General** The Farm Structure Survey (FSS) is a wide-range, periodic statistical procedure aiming at collecting objective and quantitative information in order to determine the basic characteristics of the structure of agricultural holdings in Greece. The FSS had been carried out in 1966/67, 1977/78 and since 1983 it was conducted every 2 years, except for the census years 1991, 2000 and 2010. From 2010 onwards, it is conducted every 3 years, i.e., it was conducted in 2013 and will be conducted again in 2016. The 2013 FSS received funding from the European Union.

**Scope** The FSS aims at collecting statistical data on the number of agriculture and livestock holdings at national, regional and local level, on the characteristics of those holdings as regards their legal form, type of tenure, structure (type of crops, livestock and poultry, farming techniques, etc), as well as on the utilized methods of agricultural production. The data are necessary for drawing National and Community policy in the Agricultural Sector. Furthermore, these data fulfil national and international needs and obligations, as well.

**Legal framework** The legal framework for the FSS is set out in National and Community Legislation. The survey was conducted concomitantly in all European Union Member States in accordance with Council Regulation (EC) 1166/2008. The 2013 FSS was conducted pursuant to the Decisions of the President of ELSTAT 10361/Γ2-900/31-10-2013 (Government Gazette No 2860/B/11-11-2013) and 3256/Γ2-167/17-03-2014 (Government Gazette No 754/B/ 27-03-2014), amended by 128128/Γ2-1222 /20-12-2013 (Government Gazette No 3406/B/31-12-2013) and 8766/Γ2-551/16-07-2014 (Government Gazette No 2101/B/31-07-2014), respectively.

**Reference period** The reference period of the 2013 FSS data as regards crops, labour force and other characteristics was the cultivation period from 1<sup>st</sup> October 2012 to 30<sup>th</sup> September 2013. The reference date of the survey data as regards livestock was 1st November 2013.

**Methodology – Coverage** The sampling method used for this survey was the one-stage stratified random sampling.

The sampling unit is the agricultural, livestock or mixed holding (a unified unit both in terms of technical and economic perspective, which is run by a unified management body and produces agricultural products) which:

- a) has at least 1 stremma of utilized land, or
- b) has at least 0.5 stremma of greenhouses, regardless of the production type, ownership, or the location of the holding, or
- c) has animals of its own and more specifically at least: one (1) or more cows or two (2) or more other "large animals" of any type and age (oxen, horses, donkeys, mules), or five (5) or more "small animals" (sheep, goats, pigs) of any age and type, or fifty (50) or more poultry birds, or twenty (20) or more hives of "domestic" or "European" bees or five (5) or more ostriches, or
- d) cultivates mushrooms.

The statistical frame of FSS is the Farm Register which is generated from the Agricultural Census. Furthermore, the Farm Register is periodically updated from administrative sources (Registers of the Ministry of Rural Development and Food and the Ministry of Finance, specifically on New Farmers and Organic Farming), as

well as the agricultural surveys conducted by ELSTAT.

The stratification was based on the Department (NUTS3), the Type (techno-economic orientation of production) and the Economic Size of the holding. In each stratum the sample has been selected with equal probabilities by systematic random sampling from the population of holdings belonging to this stratum.

The final sample size was 92,014 holdings, corresponding to more than 12% of the total of agricultural and livestock holdings of Greece.

**Survey Organisation and Quality Control** The personnel necessary for the implementation of the survey, the processing and the presentation of the data consisted of ELSTAT staff, as well as almost 2,300 enumerators trained by ELSTAT on data collection. The data of the FSS 2013 were collected with face-to-face interviews with the owners of the agricultural holdings, on the basis of a specially designed questionnaire.

After the collection of the questionnaires, logical and completeness checks were performed. Then the data, by means of OCR (optical character reading), were entered into the electronic database. The OCR software was used also for the preliminary validation of the data. Then the data were exported in ELSTAT's database for further validation according to Eurostat's validation rules. During the quality control phase, which followed, major differences were investigated and corrections were attempted at holding level, mostly by identifying abnormally high or low values. At this stage, some follow-up interviews were also considered necessary, resulting in a number of questionnaires being completed by phone interviews. There are detailed manuals describing the various tests and control procedures and only ELSTAT employees with sufficient experience are authorised participate in the data validation and quality control process.

Finally, the results of the FSS 2013 were compared with the results of other surveys and with the available administrative data in order to identify the longitudinal trend and to assess the results. In cases of variables where large variations were detected, in depth analyses were carried out in close cooperation with the regional statistical offices and the former Ministry of Rural Development and Food.

**Data Publication** The FSS data are available for the following years: 1983, 1985, 1987, 1993, 1995, 1997, 2003, 2005, 2007 and 2013. Furthermore, census data are available for the years 1991, 2000 and 2009. Data, for 2005-2013 are available in electronic form, while for the rest of the years the data are available in hardcopy. Sole responsibility for this publication lies with ELSTAT. The Commission is not responsible for any use that may be made of the information contained therein.
