The increase of final consumption is greater than the corresponding increase of GDP, resulting in the increase of the equivalent share of the final consumption to the final demand.

3. Investments

In the 1st quarter of 2005, investments recorded a decrease of 1,0%, in relation to the same quarter of the previous year (Table 3). This decrease of the investments decelerated the increase of the final demand of the economy by 0,2%. This decrease has as a consequence the decrease of the relevant share of the investments to the final demand of the economy.
