Athens, 26 January 2004

PRESS RELEASE
HARMONIZED INDEX OF CONSUMER PRICES

NOVEMBER 2003¹

The Harmonized Index of Consumer Prices (HICP) in November 2003 as compared to November 2002, increased by 3,2%. A year earlier, the annual rate of change of the HICP was 3,9%.

The HICP in November 2003 as compared to October 2003 increased by 0,2%. A year earlier, the monthly rate of change of the HICP was 0,1%.

In the twelve months, December 02 – November 03, the annual average rate of change of the HICP was 3,5%. A year earlier, the annual average rate of change of the HICP was 3,9%.

¹ The present press release is published on 26-01-04, instead of the scheduled date 5-12-2003, because of the strike of the staff of the NSSG. For the compilation of the HICP for November 2003 were used, partly, collected prices data, in November, by the staff which did not participated in the strike and partly, estimations for the missing values, according to the Commission Regulation (EC) No 1749/96. The estimation method used was that of interpolation between the observed prices of September and December using information on the movement of prices over the same period, as observed by other price observers, (Ministry of Development-Section of Commerce, Bank of Greece).

Harmonized Index of Consumer Prices – November 2003

1996=100,0

HICP and main groups	Weights(‰) (2003)	Indices			Annual rate of change (%)	
		November			November	
		2001	2002	2003	2002/2001	2003/2002
HICP (Overall index)	1000,00	121,7	126,5	130,6	3,9	3,2
1. Food and non-Alcoholic Beverages	181,67	121,4	126,9	131,0	4,5	3,2
2. Alcoholic Beverages and Tobacco	50,47	138,6	146,9	157,4	6,0	7,1
3. Clothing and Footwear	121,55	131,2	134,9	138,3	2,8	2,5
4. Housing	91,13	116,8	121,4	127,7	3,9	5,2
5. Household Equipment	71,78	121,7	123,1	125,3	1,2	1,8
6. Health	54,53	90,3	95,3	99,1	5,5	4,0
7. Transport	136,05	112,2	116,1	119,3	3,5	2,8
8. Communication	26,51	83,8	80,0	76,8	-4,5	-4,0
9. Recreation and Culture	45,63	119,7	123,1	125,9	2,8	2,3
10. Education	19,14	131,5	137,4	143,4	4,5	4,4
11. Hotels, Cafés and Restaurants	145,36	137,1	145,8	152,5	6,3	4,6
12. Miscellaneous Goods and Services	56,19	125,2	129,0	131,6	3,0	2,0

Monthly change of HICP (Overall Index)

BACKGROUND NOTES

The Harmonized Index of Consumer Prices is compiled by the National Statistical Service of Greece, in parallel to the national Consumer Price Index.

The Harmonized Indices of Consumer Prices (HICPs) are calculated in each Member – State of the European Union for the purposes of European Comparisons, as required under the Article 121 of the Treaty of Amsterdam (109j of Treaty of European Union). The HICPs are designed for international comparison of consumer price inflation.

The HICPs are the basis for compiling the European Index of Consumer Prices (EICP) and the Monetary Union Index of Consumer Prices (MUICP), which provide the official measures of inflation in the EU15 and the Euro-zone Member States, respectively.

The characteristic of the HICPs is that they must be compiled according to several technical measures, as these are defined in the EC Regulations.

The main technical measures are, the use of a common classification of items (COICOP/HICP), the selection of the computation formula for the individual indices, the geographic and population coverage of the whole country, the annual renewal of weights, the item coverage and compilation of specific sub-indices, the minimum standards for price collection and sampling and the adjustments due to quality differences of items.

The expenditures used for the calculation of the weights of items entered into the computation of the HICPs include the expenditures of private households, the expenditures of foreign visitors and the expenditures of individuals living in collective households, while the expenditures of residents whilst in a foreign country are excluded. The weights of items are updated every January by using the prices of the previous December.

It is noted that the HICP is not a cost of living index, is not applied by a country for domestic use such as indexation or wage bargaining and is not intended to replace the national Consumer Price Index.

Between the national CPI and the Greek HICP there are similarities and differences.

The main similarities between the two indices are the following:

- Same geographic coverage, given that both indices refer to the whole country.
- Same price collection cities.
- Approximately the same item coverage.
- Use of the same classification of items (COICOP/HICP).
- Same outlets for the price collection.
- Same price data.
- Use of the same formula for the computation of the individual indices for the price collection cities (geometric mean).
- Same treatment of the seasonality of items and of reduced and missing prices.
- Same dates of release of the indices.

The main differences between the two indices are the following:

- Different base year, since the base year of the HICP is 1996=100,0, while that of the national CPI is 1999=100,0.
- Different population coverage, given that the Greek HICP covers all consumption expenditures which take place on the economic territory of Greece, independently of the category of consumer, while the national CPI covers the consumption expenditures, which take place on the economic territory of Greece, of the private households only.
- The newly significant goods and services are included in the HICP but excluded from the national CPI.
- Different weights of items and use of different data sources for the calculation of the weights.
- Different frequency of renewal and updating of the weights of items, given that the weights of items in the HICP are price updated every January to the previous December, while the weights of items in the national CPI are renewed at the revisions only of the index.

More information for the HICPs and specifically for the Greek HICP are available in NSSG website www.statistics.gr and in the special publication of the NSSG "Harmonized Index of Consumer Prices (1996=100,0)".
