

**HELLENIC REPUBLIC**  
**HELLENIC STATISTICAL AUTHORITY**

Piraeus, 13-02-2015

## **PRESS RELEASE**

### **SUPPLY & USE TABLES AND SYMMETRIC INPUT – OUTPUT TABLE**

The Hellenic Statistical Authority (ELSTAT) announces the Supply and Use Tables for the years 2010 and 2011 and the Symmetric Input – Output Table for the year 2010. These tables are compiled in accordance with the European System of Accounts ESA 2010 and are consistent with the corresponding annual national figures.

On 26 June 2013, the Regulation (EU) No 549/2013 of the European Parliament and of the Council on the European System of National and Regional Accounts in the European Union - ESA 2010 was published in the Official Journal of the European Union (L 174/1). The new European System of National and Regional Accounts (ESA2010) replaced ESA 1995 (Regulation 2223/96).

Pursuant to the provisions of Regulation (EU) 549/2013 the Supply and Use Tables are to be compiled for the years 2010 and 2011 and the Symmetric Input – Output Table for the year 2010<sup>1</sup>.

Supply - Use and Input - Output Tables provide detailed information for a given year on production activities, the supply and demand of goods and services, intermediate consumption, primary inputs and foreign trade.

Supply and Use Tables are matrices by product and industry showing the production processes and transactions for particular products or industries.

Symmetric Input - Output Tables compiled by ELSTAT are product-by-product matrices combining both Supply and Use into a single table with identical classification of products applied to both rows and columns.

These tables present:

---

<sup>1</sup> Supply - Use tables are compiled annually, while the symmetric Input-Output table is compiled every five years. According to ESA 2010 transmission programme, the tables cover the period from 2010 onwards and are transmitted to Eurostat t+36 months after the end of the reference year.

- a) the structure of the costs of production and the value added that is generated in the production process;
- b) the flows of goods and services produced within the Greek economy; and
- c) the flows of goods and services with the rest of the world.

For the compilation of Supply-Use and Input - Output tables data are used from the tables, which are compiled by the National Accounts Division of ELSTAT for the calculation Gross Domestic Product (GDP) and of macroeconomic variables.

Many sources are used for the compilation of the above-mentioned variables. The main data sources are the following:

- o Surveys carried out by ELSTAT, such as structural business surveys (SBS), the household budget survey (HBS), foreign trade statistics, the labour force survey (LFS), the labour cost survey, the survey for rents, the population and housing census, short-term price and volume indices, etc.
- o Administrative sources, such as the State Budget Outturn, etc.
- o Balance of Payments data from the Bank of Greece, data from the business register of ELSTAT, value added tax data from the Ministry of Finance, etc.
- o Other sources, such as balance sheets of enterprises, etc.

The data are presented in NACE Rev. 2 with a breakdown of 64 activities and in CPA 2008 with a breakdown of 64 products.

The figures in the Supply and Use Tables are published at current prices and the figures in the Symmetric Input – Output Table are published at basic prices of current year.

The Supply and Use Tables and the Symmetric Input – Output Table are available on the portal of ELSTAT at the following link:
