**GENERAL SECRETARIAT OF  
THE NATIONAL STATISTICAL SERVICE  
OF GREECE**

Piraeus, 12 September 2008

## **PRESS RELEASE**

### **Production Index in Construction<sup>1,2,3,4</sup> (2000=100,0)**

#### **Second quarter 2008**

The National Statistical Service of Greece publishes the Production Index in Construction, with base year 2000=100,0, for the 2<sup>nd</sup> quarter 2008, according to provisional and working day adjusted data, as follows:

- The Production Index in Construction for the 2<sup>nd</sup> quarter 2008, as compared to the 2<sup>nd</sup> quarter 2007, rose by 8.2%. A year earlier, the year-on-year growth rate of the index was 24.0%.
- The Production Index in Construction for the 2<sup>nd</sup> quarter 2008, as compared to the 1<sup>st</sup> quarter 2008, rose by 24.4%. A year earlier, the quarter-on-quarter growth rate of the index was 21.1%.

<sup>1</sup> The Production Index in Construction is a new index with base year 2000=100.0, covering the period from 2000 onwards. The compilation and publication of the new index is based on the framework of requirements of the Council Regulation (EC) No 1165/98 concerning short-term statistics (STS-R), as well as the amendment Regulation (EC) No 1158/05 of the European Parliament and Council, amending the Council Regulation (EC) No 1165/98.

<sup>2</sup> The purpose of the Production Index in Construction is to measure, on a short-term basis, the price-change adjusted own performance of the construction sector and its most important parts. The index measures the evolution of volume trend in value added at factor cost of production in construction. The main aim of this index is the measurement of the evolution of production in construction. The purposes and the characteristics of the Production Index in Construction apply, as well, to the indices of the two most important parts of construction, the Production Index of Building Construction and the Production Index of Civil Engineering.

<sup>3</sup> The Production Index in Building Construction includes the cost of: demolition, site formation and clearance work, general construction work for buildings (new work, additions, alterations and renovation work), installation work of electrical wiring and fittings and other building installation work. Buildings include one- and two-dwelling buildings, multi-dwelling buildings, hotels, office buildings, industrial and retail trade buildings, public entertainment and education buildings, hospitals and other non-residential buildings.

The Production Index of Civil Engineering includes the cost of: motorways, roads, streets, railways and airfields runways, sport facilities, bridges, tunnels, subways, long-distance pipelines, communication and power lines (oil and gas pipelines, electricity lines, telecommunication lines), water projects, etc.

<sup>4</sup> All figures in this release are based on data adjusted for working days. The data are provisional when first released and become final as soon as all gathered data become definite. More specifically, the data released for the most recent quarter are provisional and are published together with revised data of the previous quarter.

The increase of the Production Index in Construction by 8.2% in the 2<sup>nd</sup> quarter 2008, as compared to the 2<sup>nd</sup> quarter 2007, was due to the year-on-year changes as following:

- The Production Index of Building Construction rose by 12.4%.
- The Production Index of Civil Engineering rose by 6.0%.

The increase of the Production Index in Construction by 24.4% in the 2<sup>nd</sup> quarter 2008, as compared to the 1<sup>st</sup> quarter 2008, was due to the quarter-on-quarter changes as following:

- The Production Index of Building Construction rose by 25.3%.
- The Production Index of Civil Engineering rose by 24.0%.
